Dalitz Plot Analysis of $\eta \rightarrow \pi^+ \pi^- \pi^0$

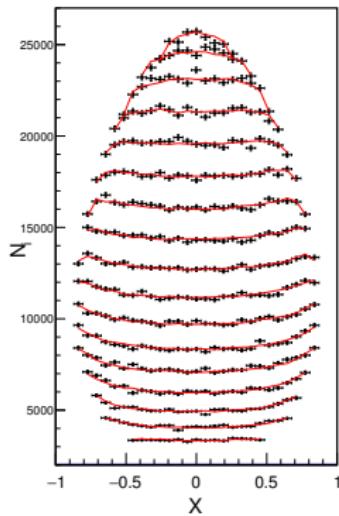

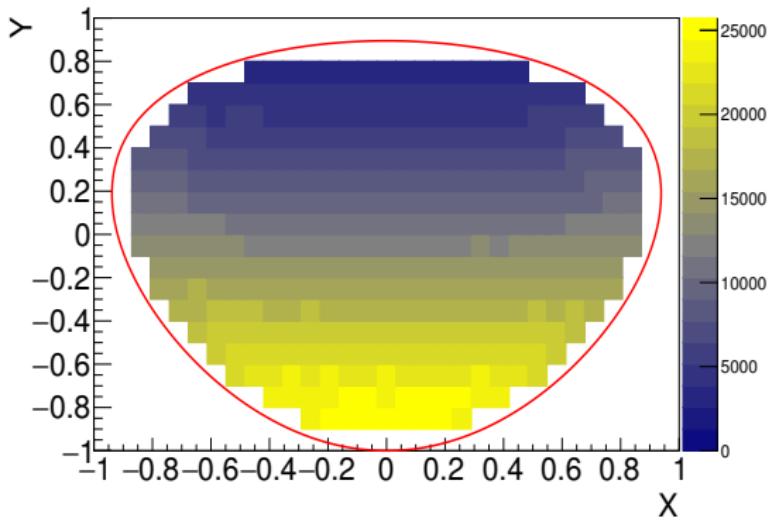

Dimensionless Dalitz Plot Variables:

$$X = \sqrt{3} \frac{T_{\pi^+} - T_{\pi^-}}{T_{\pi^+} + T_{\pi^-} + T_{\pi^0}}$$

$$Y = 3 \frac{T_{\pi^0}}{T_{\pi^+} + T_{\pi^-} + T_{\pi^0}} - 1$$

- Complete information about decay dynamics
- Parameterise decay width Γ :
$$\frac{d^2\Gamma}{dXdY} \propto (1 + aY + bY^2 + cX + dX^2 + eXY + fY^3 + gX^2Y + \dots)$$
- $c \neq 0$ and $e \neq 0$:
 - Imply C-violation
 - Cause asymmetries within the Dalitz Plot
- Compare Dalitz Plot parameters a,b,d,f from experiment and theory

Correlations between Systematic Errors

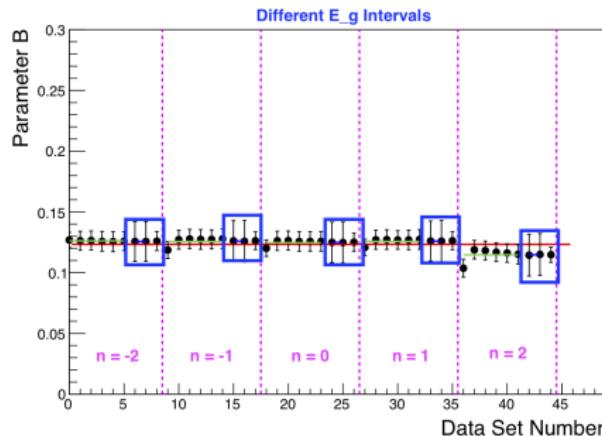

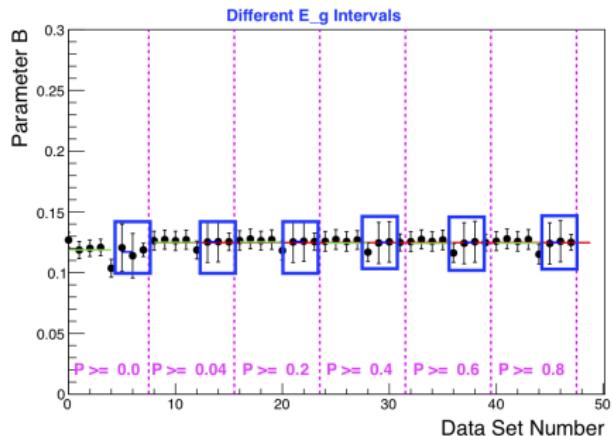

- Left: Systematics related to the kinematic fit: $P \geq X$

- Correlations:
 - Cluster-wise behavior/variation
⇒ Describe systematics related to the current variable

Summary and Outlook

- Refined estimation of systematic errors:
 - ▶ Reduced bias in error estimation
↔ Results from other experiments are not included
 - ▶ Include (possible) correlation between errors
 - ▶ Errors are in a “reasonable” range, compared to beginning of this analysis (40% vs. 13%)
- Still missing / ongoing:
 - ▶ Number of Dalitz Plot bins ↔ Resolution
 - ▶ Analysis Note
