

# Solenoid Model Status Update

Nov 2018

Victoria Lagerquist, Sebastian Kuhn (ODU)  
with help from Mac Mestayer, Ruben Fair and  
Renuka Rajput-Ghoshal (JLab)

# Last Update

Short Runs (middle 10 cm, 1 mm steps)	
Radius (cm)	Phi
0	/
1.25	0, 90, 180, 270, 90, 45, 45, 45, 135, 225, 315
Long Runs (full length, 1 cm steps)	
Radius (cm)	Phi
0	/
1.25	0, 45, 45, 45, 90, 90, 135, 180, 225, 270, 315
30	0, 90, 270
Long Runs (probe rotated in place)	
Radius (cm)	Phi
0	/
1.25	90
30	0

# Last Update

**Ruben Fair**

## INCLUDED:

- (i) AS-WOUND DIMENSIONS
- (ii) CONTRACTION TO 4.2 K (AXIAL AND RADIAL)
- (iii) C1, C2, C3, C4 MOVEMENT IN Z DUE TO ENERGIZATION

## NOT INCLUDED:

- (i) RADIAL COIL DEFORMATION DUE TO ENERGIZATION
- (ii) COIL DEFORMATION DUE TO GRAVITATIONAL LOADS
- (iii) COIL DISPLACEMENTS DUE TO BUILD OR TRANSPORT
- (iv) COIL MOVEMENTS RELATIVE TO ONE ANOTHER DURING COOL DOWN AND/OR ENERGIZATION

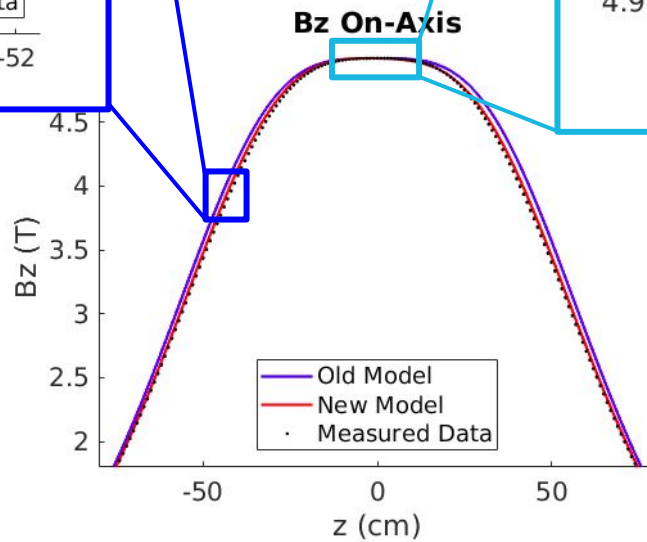

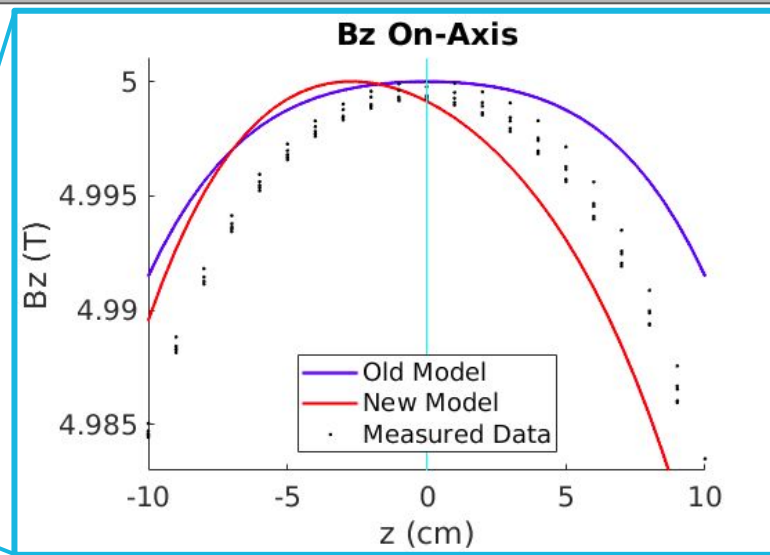

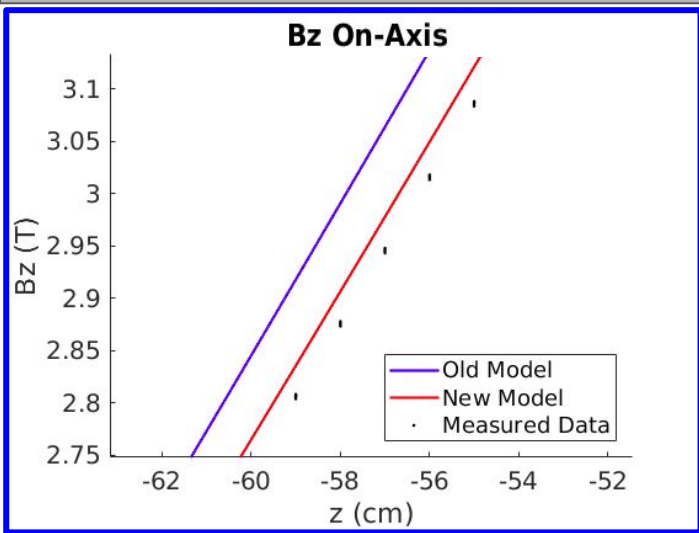

Opera  
COMM

Coil No	ID (mm)	OD (mm)	LG (mm)	dID (mm)	dOD (mm)	dLG (mm)
1	854.71	1089.35	346.82	-2.79	-3.56	-1.13
2	853.27	1089.00	346.82	-2.79	-3.56	-1.13
3	1160.12	1415.41	381.48	-3.45	-4.62	-1.25
4	1157.48	1415.31	381.48	-3.45	-4.62	-1.25
5	1800.34	1892.47	1508.18	-5.38	-6.18	-4.93

# Last Update

New ( June ) model ( red )  
fit the data ( black ) more  
closely on the sides and  
the overall shape...

...but, in the central region,  
there was an asymmetry  
that could not corrected  
for.

# Last Update

**Br Off-Axis  $r = 30$  cm**

**Bz Off-Axis  $r = 30$  cm**

Both old and new models were unable to account for the data far off-axis ( $r = 30$  cm).

# New Work

**opera**  
simulation software

After last meeting: received models and began work on updating them to agree with measured data.

# Opera Models

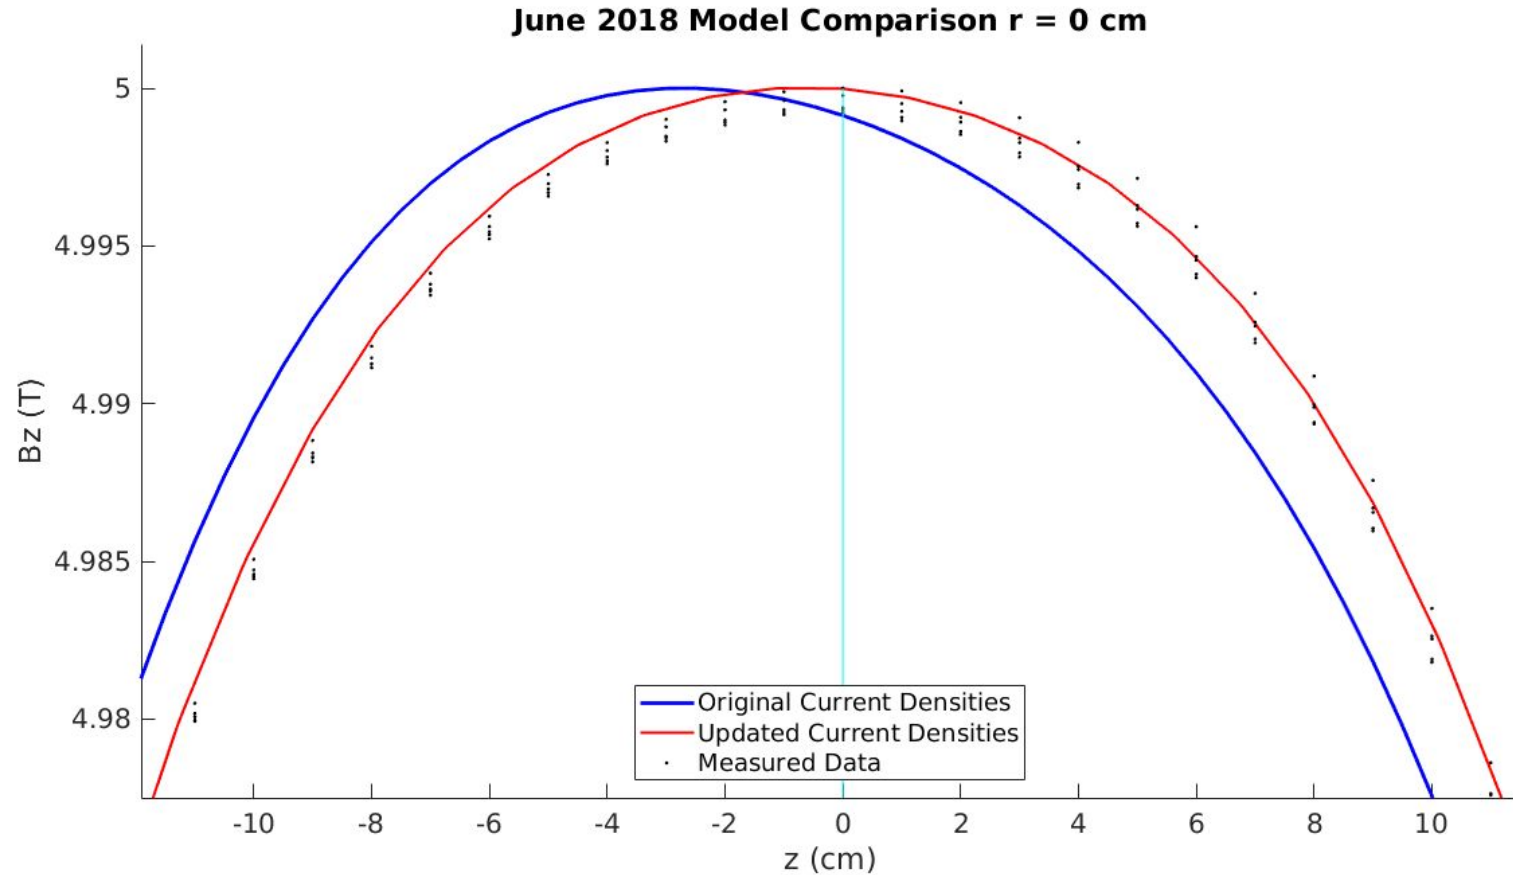

Solenoid modelled using  
Opera-3D software.

‘Conductors’ defined by  
cross sectional area and  
current density.

Two base models available.

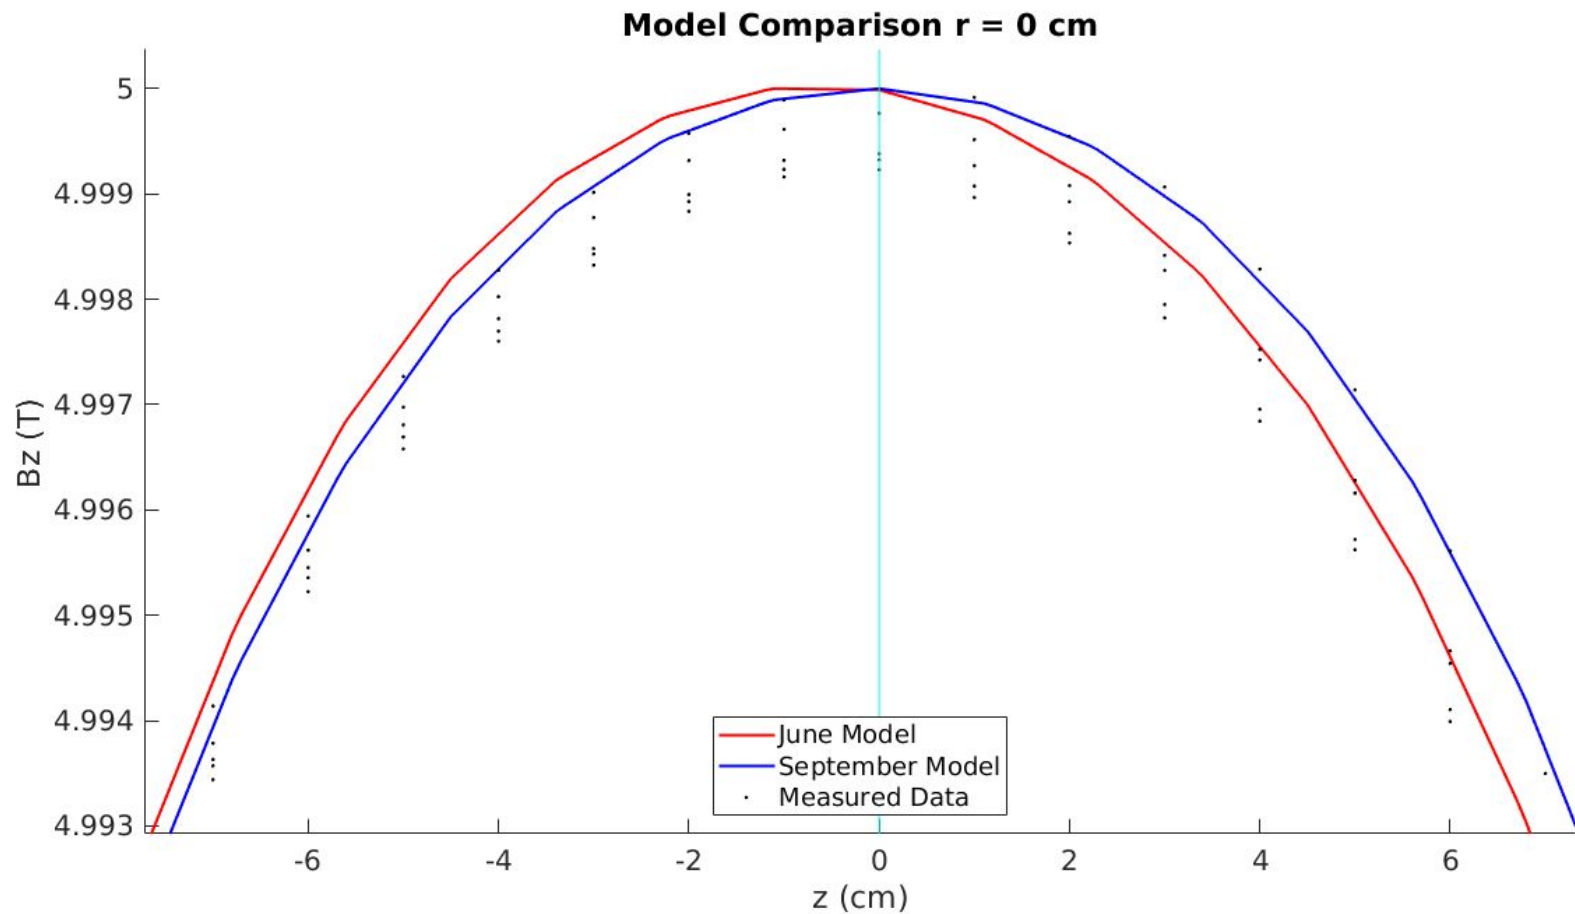

# June Model Updated

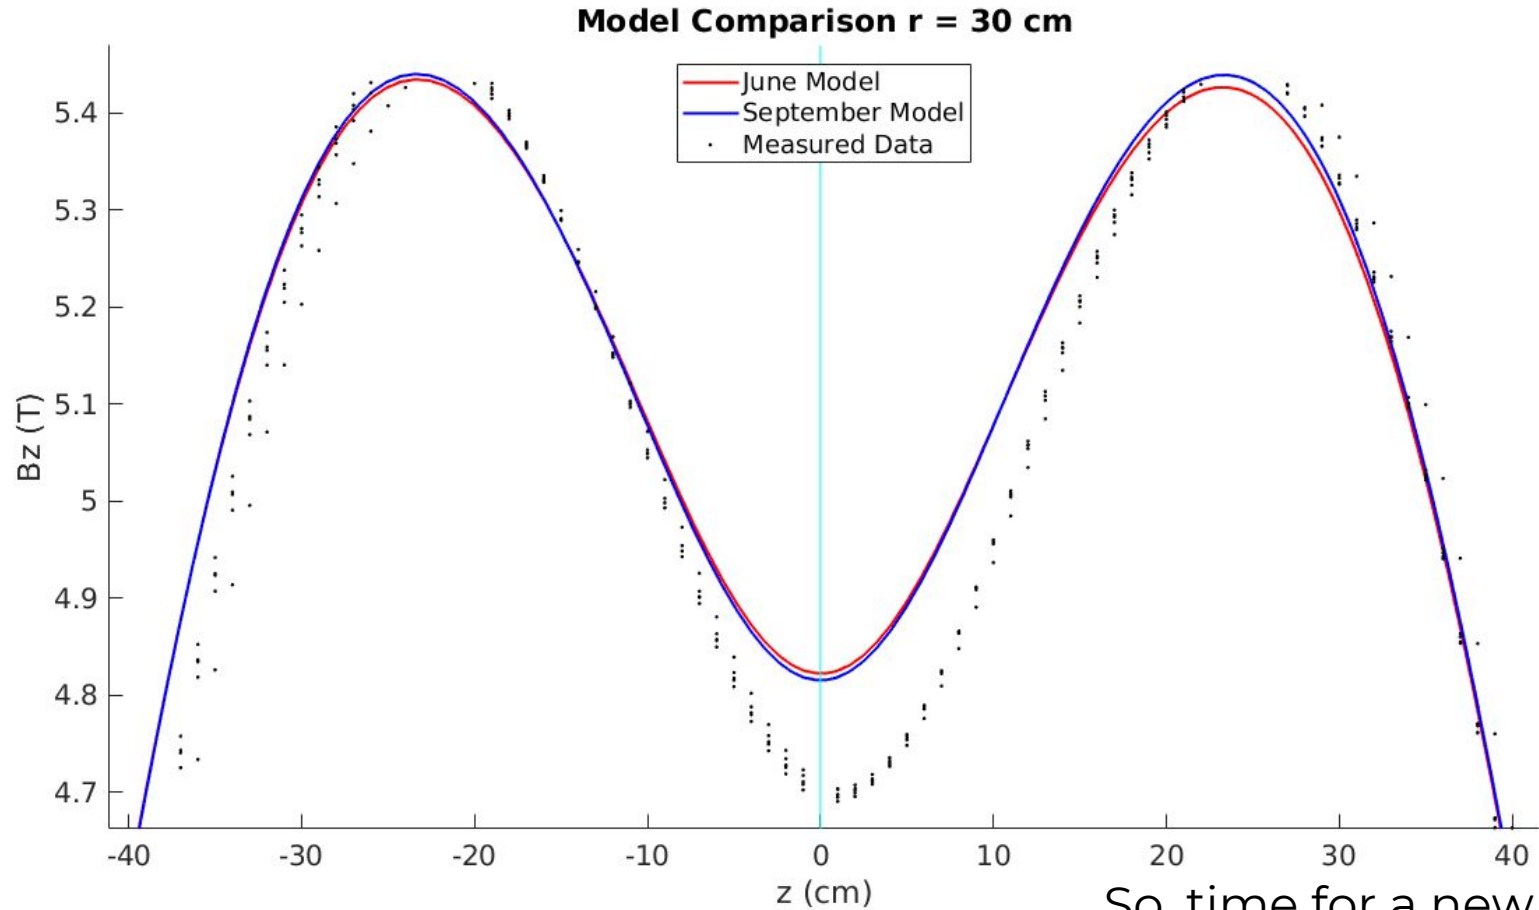

# Two Models Agree

# Far Off Field

# Solenoid Design

**Ruben Fair**

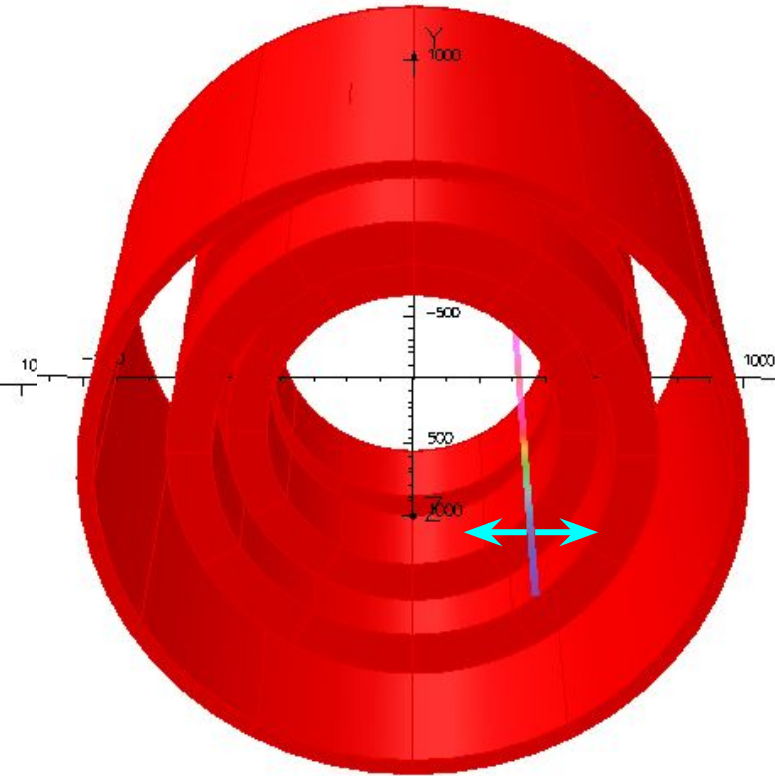

**John Hogan**

Solenoid design:  
Two bobbins  
holding five coils.

Some coils more  
restricted than  
others.

# Needed Next

- Narrow down permissible range of current scaling
- Determine exact probe position relative to model
- Establish boundaries in coil movements to limit number of simulations
- Use on-axis comparisons to reduce redundant parameters
- Use similar technique used for Torus modelling
