Determination and status of the light baryon and hyperon spectrum

QNP2022 - The 9th International Conference on Quarks and Nuclear Physics

September 7, 2022 | Deborah Rönchen | Institute for Advanced Simulation, Forschungszentrum Jülich

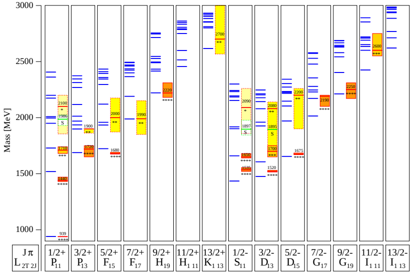
Supported by DFG, NSFC, MKW NRW

HPC support by Jülich Supercomputing Centre

Motivation: N^* and Δ^* spectrum

- In the past: most information from elastic or charge exchange πN scattering,
  e.g. Karlsruhe-Helsinki (KH), Carnegie-Mellon-Berkeley (CMB), George-Washington U (GWU)
- Theoretical predictions, e.g., from quark models (later: lattice calculations)
  $\rightarrow$ “Missing resonance problem”: above 1.8 GeV much more states are predicted than observed

Relativistic quark model:



Löring *et al.* EPJ A 10, 395 (2001), experimental spectrum: PDG 2000

20 years later the “Missing resonance problem” is still not solved ...

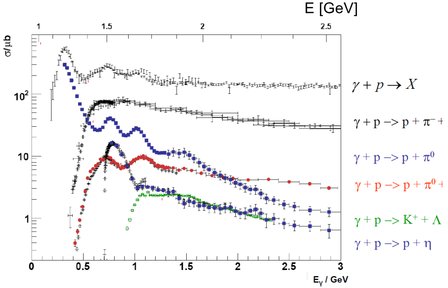
... but there has been progress.

Reviews on baryon spectroscopy:

Prog.Part.Nucl.Phys. 125, 103949 (2022),
Rev. Mod. Phys. 82, 1095 (2010)

Experimental studies of photoproduction reactions:

major progress in recent years e.g. from JLab, ELSA, MAMI, GRAAL, SPring-8, ...



source: ELSA; data: ELSA, JLab, MAMI

- enlarged data base with high quality for different final states
  Reviews: Prog.Part.Nucl.Phys. 111 (2020) 103752, Rept. Prog. Phys. 76, 076301 (2013)
- (double) polarization observables
  - $\rightarrow$ alternative source of information besides $\pi N \rightarrow X$
  - $\rightarrow$ detect states that couple only weakly to πN
  - $\rightarrow$ towards a complete experiment

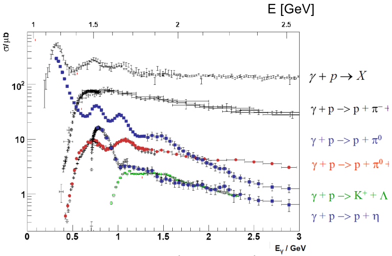
- Photoproduction of pseudoscalar mesons:

- 16 polarization observables: asymmetries composed of **beam**, **target** and/or **recoil** polarization measurements

- Complete Experiment: unambiguous determination of the amplitude Chiang, Tabakin, PRC 55, 2054 (1997), also PRC 95 (2017) 1, 015206

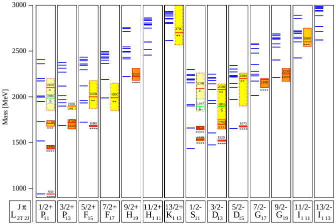
8 carefully selected observables e.g. $\{\sigma, \Sigma, T, P, E, G, C_x, C_z\}$

From experimental data to the resonance spectrum



source: ELSA; data: ELSA, JLab, MAMI

⟺



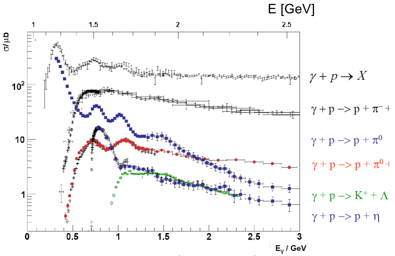
Löring *et al.* EPJ A 10, 395 (2001), experimental spectrum: PDG 2000

Different modern analyses frameworks:

- **unitary isobar models:** unitary amplitudes + Breit-Wigner resonances
  MAID, Yerevan/JLab, KSU
- **(multi-channel) K-matrix:** GWU/SAID, BnGa (phenomenological),
  Gießen (microscopic Bgd)
- **dynamical coupled-channel (DCC):** 3d scattering eq., off-shell intermediate states
  ANL-Osaka (EBAC), Dubna-Mainz-Taipeh, Jülich-Bonn
- **other groups:** JPAC (amplitude analysis with Regge phenomenology), Mainz-Tuzla-Zagreb PWA (MAID + fixed-t dispersion relations, L+P), Ghent (Regge-plus-resonance), truncated PWA
- ...

Detailed comparison of MAID, GWU/SAID, BnGa and JüBo: EPJ A 52, 284 (2016)

From experimental data to the resonance spectrum



source: ELSA; data: ELSA, JLab, MAMI

JÜLICH Forschungszentrum

Recent results from MAID, GWU/SAID, BnGa and JüBo

Selected examples

All 4 groups are constantly including new data sets, primarily from photoproduction

- Mainz-Tuzla-Zagreb: - coupled channels analysis of η, η' photoproduction: “EtaMAID2018” (EPJ A54 (2018) 210)
  - SE PWA of pion photoproduction with fixed-t analyticity PRC 104, 034605 (2021)
- GWU/SAID: - XP15 solution: including new $\pi^{\pm} p \to \pi^{\pm} p$ data (EPECUR, PRC 91 (2015) 025205, see also PRC 93 (2016) 062201(R))
  - MA19 solution: $\gamma n \to \pi^0 n$ (PRC 100 (2019) 065205)
    $\to$ first determination of photon decay amplitudes $N^* \to \gamma n$ at the pole for $N(1520)3/2^-$

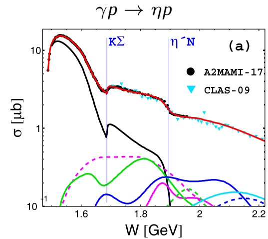

figure: EPJ A 54, 210. Red: EtaMAID2018. Black: S_{11}

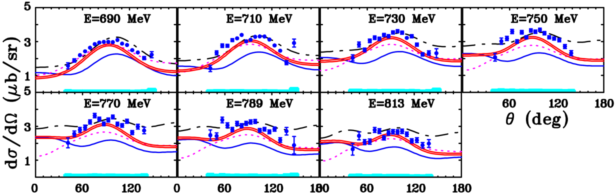

← Figure from PRC 100 (2019) 065205

Data: A2 at MAMI (PRC 100 (2019) 065205)
Lines: red: MA19,
blue solid: MA27,
black dash-dotted: MAID2007,
magenta dotted: BnGa2014-02

Recent results from MAID, GWU/SAID, BnGa and JüBo

Selected examples

All 4 groups are constantly including new data sets, primarily from photoproduct

- BnGa: analyses of recent $\gamma p \rightarrow \eta p$ data (CBELSA/TAPS):
  - Σ PRL 125, 152002 (2020): further evidence for $N(1895)1/2^-$
  - T, E, P, G, H PLB 803, 135323 (2020): difference in ηN branching ratio of $N(1535)1/2^-$ and $N(1650)1/2^-$ reduced significantly
- JüBo: extension to $K\Sigma$ photoproduction, inclusion of other recent photoproduction data 2208.00089 [nucl-th]:
  $N(1900)3/2^+$ important, more information on Δ states

Σ in $\gamma p \rightarrow \eta p$

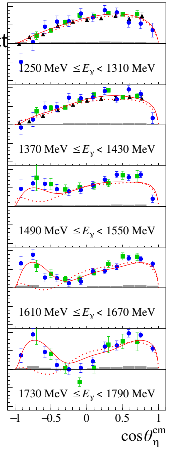

Figure and data (blue points) from Afzal et al. [CBELSA/TAPS] PRL 125 (2020). Black triangles: GRAAL EPJA 33 (2007). Green squares: CLAS PLB 771 (2017)

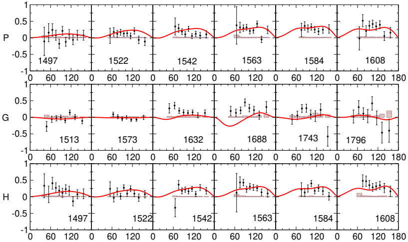
Red solid lines: BnGa fit

$\gamma p \rightarrow \eta p$



Data from Müller et al. [CBELSA/TAPS] PLB 803, 135323 (2020).

Red lines: JüBo fit 2208.00089 [nucl-th]

$\hookrightarrow$ reduced difference of ηN residue of S_{11} states confirmed in JüBo

JÜLICH Forschungszentrum

PDG N^* ratings 2009 (left) vs 2020 (right)

- New states, e.g. $N(1900)3/2^+$, $N(1895)1/2^-$, observed especially in kaon and eta photoproduction e.g. PRL 119, 062004 (2017), PRL 125, 152002 (2020)
- new values for Λ decay parameter α_- from kaon photoproduction (Ireland PRL 123 (2019) 182301) (see also Ablikim (BESIII), Nature (2019)) $\rightarrow$ polarization observables affected by α_- are $\sim$ 17% too large!

new upgraded

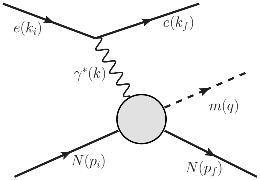
Electroproduction of pseudoscalar mesons



Experimental studies of electroproduction:

major progress in recent years, e.g., from JLab, MAMI, ...

- 10^5 data points for πN, ηN, KY, $\pi\pi N$ electroproduction
- access the Q^2 dependence of the amplitude

  $\rightarrow$ expected to provide a link between perturbative QCD and the region where quark confinement sets in

  $\rightarrow$ information on the internal structure of resonances

Electroproduction of pseudoscalar mesons:

$\Rightarrow$ 36 (polarization) observables,
complete experiment = 12 observables

V. Dmitrasinovic, T.W. Donnelly, and F. Gross, in *Research Program at CEBAF (III)*, *RPACIII* (CEBAF, Newport News, 1988). Tiator et al. Phys.Rev.C 96 (2017) 2, 025210

$\gamma^* p \rightarrow \pi^0 p$

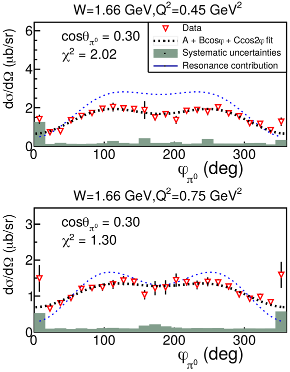


Figure and data from Markov et al. (CLAS) PRC 101 (2020),

resonance contribution: JLab/YerPhI

- so far, no new N^* or Δ^* established from electroproduction: data have not yet been analyzed on the same level as photoproduction data

Review theory and experiment: Aznauryan and Burkert, Prog.Part.Nucl.Phys. 67 (2012); Mokeev and Carman 2202.04180 [nucl-ex]

Phenomenological analyses of electroproduction

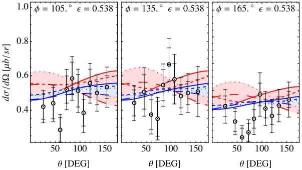
Single-channels analyses, e.g.:

- MAID: π, η electroproduction (EPJA 34, 69 (2007), NPA 700, 429 (2002),)
- JLab: π electroproduction covering the resonance region (PRC 80 (2009) 055203)
  Study of $\pi^+\pi^-p$ photo- and electroproduction: evidence for a new $N'(1720)3/2^+$ (PLB 805, 135457 (2020)) (needs confirmation!)

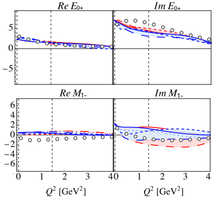
Coupled-channels analyses:

- so far, no coupled-channel analysis of photo & electroproduction with simultaneous study of πN, ηN, KY final states
- Jülich-Bonn-Washington approach M. Mai *et al.* PRC 103 (2021): $\gamma^* p \to \pi^0 p$, $\pi^+ n$ and ηp (photoproduction as boundary condition at $Q^2 = 0$) PRC 106, 015201 (2022)

Selected fit results: $\gamma^* p \to \eta p$ at $W = 1.5$ GeV, $Q^2 = 1.2$ GeV^2. Data: Denizli et al. (CLAS) PRC 76 (2007)



Selected multipoles at $W = 1535$ MeV

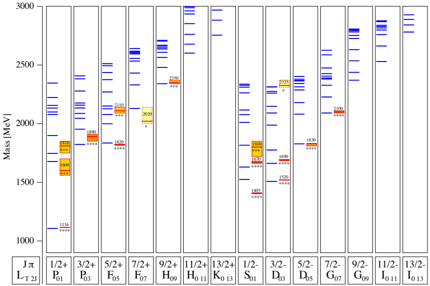


- ANL-Osaka: extension of DCC analysis of pion electroproduction (PRC 80, 025207 (2009)) in progress (Few Body Syst. 59 (2018) 3, 24)

The Hyperon Spectrum: Λ^* and Σ^* resonances

The Hyperon Spectrum (Λ^*'s and Σ^*'s)

Relativistic quark model: Λ^*'s



Löring *et al.* EPJ A 10, 447 (2001), Model A, exp. spectrum: PDG 2000

- Testing ground for theories of the strong force: what happens if we replace a light quark with an s quark?
- even more missing resonances than for N^*'s and Δ^*'s
- high interest in low-energy region and $\Lambda(1405)$ Review: Mai, Eur.Phys.J.ST 230 (2021)
- very little new experimental data in the last decades for the complete resonance region

Review on Hyperon spectroscopy:

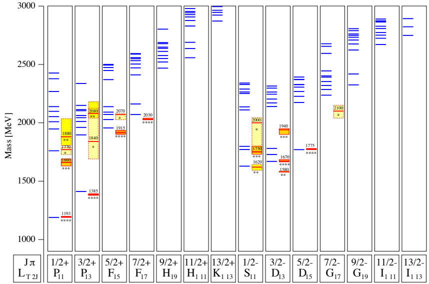
E. Klempt et al. Eur.Phys.J.A 56 (2020)

4 groups re-analyzed old $K^- p$ data over the complete resonance region:

- Kent: multi-channel PWA of $\bar{K}N$ scattering, $W = 1480$ to 2100 MeV PRC 88, 035204 & PRC 88, 035205 (2013)
- JPAC: unitary multichannel model for $\bar{K}N$ scattering, fit to Kent SE PWA PRD 93, 034029 (2016)
- ANL/Osaka: dynamical coupled-channel model for $\bar{K}N$ reactions PRC 90, 065204 (2014) & PRC 92, 025205 (2015)
- BnGa: multi-channel PWA based on a modified K-matrix approach EPJA 55,179 & 180 (2019)
- JüBo: in progress

The Hyperon Spectrum (Λ^*'s and Σ^*'s)

Relativistic quark model: Σ^*'s



Löring *et al.* EPJ A 10, 447 (2001), Model A, exp. spectrum: PDG 2000

- Testing ground for theories of the strong force: what happens if we replace a light quark with an s quark?
- even more missing resonances than for N^*'s and Δ^*'s

Hyperon spectrum: Prospects for new data

Current experiments:

- Photoproduction (CLAS): Hyperon resonances abundantly produced as intermediate states in $\gamma p \to K^+(\Sigma\pi)$ and $K^+(K^- p)$ Phys. Rev. Lett. 112, 082004 (2014), Phys. Rev. C 88, 045201 (2013)
  Exploratory coupled-channel analysis: EPJA 57, 236 (2021): difficult to extract Y^* spectrum
- LHCb: $\Lambda_b^0 \to J/\psi\Lambda^* \to J/\psi K^- p$ decay Phys.Rev.Lett. 115 (2015) 072001

Future experiments:

- K_L facility at JLab: Strange Hadron Spectroscopy with a Secondary K_L Beam at GlueX (approved) 2008.08215 [nucl-ex]
  $\hookrightarrow$ Talk by Michael Döring later today
- J-PARC: extract $\bar{K}N$ amplitude from kaonic atom experiments JPS Conf. Proc. 26, 023013 (2019)
  $\hookrightarrow$ Talks on Friday
- PANDA at FAIR: $\bar{p}p \to \bar{Y}Y^*$: besides Ξ^* and Ω^* also Λ^* and Σ^* spectrum accessible 0903.3905 [hep-ex]

Summary and Outlook

Extraction of the N^* and Δ spectrum from experimental data: major progress in last decade

- new information from photoproduction data $\rightarrow$ new and upgraded states in PDG table
- wealth of high-quality electroproduction data, more at high Q^2 in the future (CLAS12)
  $\rightarrow$ to be included in modern coupled-channel analyses (in progress)

Extraction of the Λ^* and Σ^* spectrum from experimental data:

- very little new experimental data in the last decades
- established states the same as in 1984
- prospects for new data from different facilities

Thank you for your attention!
