Key4hep: Progress Report on Integrations

Gerardo Ganis, André Sailer
On behalf of the Key4hep project

CERN

26th International Conference on Computing in High Energy & Nuclear Physics (CHEP2023)
May 8–12, 2023
Norfolk, Virginia, USA
Introduction

Ongoing Integrations
  Simulation Integrations
  Reconstruction Packages
  RDataFrame Analysis
  Visualisation with Phoenix
  Testing

Summary & Outlook
Key4hep: Turnkey Software Stack

Structured software stack integrating individual packages towards a complete data processing framework for HEP experiments

- Reduce overhead for adopting projects by sharing common components
- Easy to use for librarians, developers, users
- Functionality-complete: plenty of examples for simulation and reconstruction of detectors
- Preserve and adapt existing functionality into the stack, e.g., from iLCSOft, FCCSW, CEPCSW

Main ingredients

Event Data Model (podio/EDM4hep) (see talk by T. Madlener), Geometry Information (DD4hep), Processing Framework (Gaudi), Package manager (Spack)
International Community

- Contributors/Interest from China, Germany, Italy, Americas, CERN; CEPC, CLIC, EIC, FCC, ILC, MuonCol
  - Significant overlap with EIC software (DD4hep, podio/EDM4hep, ACTS, spack) (cf. EIC software talk)
- Funded by CERN EP R&D (WP7), AIDAInnova (WP12)
  - Supported by ECFA (connections w/ WG2, WG3)
- New communities are always welcome to
  - join our Meetings:
    - Tuesday, 9:00 AM CET, weekly alternating EDM4hep/Key4hep
      https://indico.cern.ch/category/11461/ (once per month: 3 PM CET for collaborators in Americas (EIC))
  - have a look at the documentation with some working examples: http://cern.ch/key4hep
  - browse the code: http://github.com/key4hep
Selected sample of recent Presentations (since vCHEP)

- **Key4hep: Status and Plans** (A. Sailer, vCHEP 2021, 18 May 2021)
- **The Key4hep turnkey software stack for future colliders** (P. Fernandez Declara, EPS-HEP Conference 2021, 29 July 2021)
- **Common software for future colliders: The Key4hep turnkey** (P. Fernandez Declara, ILCX2021, 28 October 2021)
- **Key4hep software Stack for Detector Studies** (P. Fernandez Declara, ACAT, 1 December 2021)
- **Key4HEP: Common Software for Future Experiments** (B. Hegner, IAS Program on HEP, 12 January 2022)
- **A common software for future colliders: The Key4hep turnkey software stack** (V. Volkl, Lepton-Photon 2021, 12 Jan 2022)
- **Key4hep Project Status Update** (V. Volkl et al., ICHEP, 9 July 2022)
- **The Software Eco-System** (T. Madlener, ECFA Workshop on e+e- Higgs/EW/Top Factories, 6 October 2022)
- **Simulation: Going Fast, Full and Fully Fast** (A. Sailer, ECFA Workshop on e+e- Higgs/EW/Top Factories, 6 October 2022)
- **The Key4hep Turnkey Software Stack: Beyond Future Higgs Factories** (V. Volkl et al., ACAT, 23 October 2022)
- **Future Collider Framework** (A. Sailer, Muon Collider Annual Meeting, 12 October 2022)
- **Key4hep and FCC software** (G. Ganis, FCC Physics Workshop, 24 January 2023)
Simulation Integrations

- Key4hep allows to run fast parameterized simulation via Delphes, or Geant4 Simulation via DD4hep::ddsim (standalone) and k4SimGeant4 (Gaudi interface)
  - All solutions output data in EDM4hep format to be used in digitisation / reconstruction
- k4SimGeant4 essentially has the same goal as Gaussino
  - Adoption of Gaussino planned as a replacement for k4SimGeant4, aligning-with/adopting functionality from DD4hep::DDG4

Diagram:

Track Reconstruction

- iLCSoft tracking algorithms available through the *k4MarlinWrapper* approach

- Integration of the ACTS tracking toolkit as thin Gaudi Algorithm ongoing:
  - Converting from EDM4hep to ACTS formats (see [P. Gessinger](#))

- Inject/add into ACTS surface information provided by `dd4hep::rec::Surface`
  - After the geometry instantiation, via DD4hep's plugin mechanism
PandoraPFA: Particle Flow Clustering

PandoraPFA

Particle Flow clustering toolkit for high-granularity calorimeters. Currently available through the k4MarlinWrapper approach, validation wrt Marlin required.

- Fairly consistent results for reconstruction comparing k4MarlinWrapper wrt Marlin including PandoraPFA
- Adaptation to new detector concepts, e.g. LAr-based, through DD4hep geometry drivers / plugins

Plan to develop Gaudi based interface to PandoraPFA
Clustering with Clue

- Clue (Clustering Energy) is a GPU friendly clustering algorithm developed for CMS HGCal
- k4CLUE integration of Clue for the Key4hep stack able to reconstruct clusters in different detectors, more flexible approach digesting DD4hep information to come

Reconstruction of 500 Photons in CLD ECal
Analysis with RDataFrame

- EDM4hep data stored in ROOT Tree / RNTuple lends ideal candidate for analysis with RDataFrame
- Collection of tools in FCCAnalyses
- Example parts of the Higgs-Factory “Standard Candle” Higgs-Recoil analysis

```r
# define an alias for electron index collection
 Alias("Electron0", "Electron#0.index")
# define the electron collection
 Define("electrons", "ReconstructedParticle::get(Electron0, ReconstructedParticles)")
# select electrons on pT
 Define("selected_electrons", "ReconstructedParticle::sel_pt(10.)(electrons)")
# ...
 Define("zed_leptonic_recoil_m","ReconstructedParticle::get_mass(zed_leptonic_recoil)")
# create branch with leptonic charge
 Define("zed_leptonic_charge","ReconstructedParticle::get_charge(zed_leptonic)")
# Filter at least one candidate
 Filter("zed_leptonic_recoil_m.size()>0")
```
Visualisation with Phoenix

- **Phoenix** an experiment independent web-based event display for HEP, used by ATLAS, LHCb, ...
- Adapted for use in Key4hep
  - Detector DD4hep-based geometries converted with JSROOT
    - Some pruning and configuration still needed to make detectors look nice
  - Event Data exported as JSON
- Example: [https://fccsw.web.cern.ch/fccsw/phoenix/](https://fccsw.web.cern.ch/fccsw/phoenix/)
Testing

- The rate of changes and updates in the functionality requires monitoring and validation of performance
- Setting up continuous validation system able to monitor key performance indicators for any community (Detector Model) in Key4hep
- **Valprod**: toolkit to support building comprehensive validation jobs
  - Support CPU flame graph, I/O profiling
  - Integration with **HSF::prmon**
Summary & Outlook

- Key4hep project is providing a common framework for future Higgs factories
  - Fully adopted by FCC, increasing adoption by CLIC, ILC, CEPC
  - Interest grown beyond the initial electron–positron collider communities (EIC)
  - New collaborators are always welcome

- Consolidation and expansion of the software stack to match the needs of the community is ongoing
  - By integrating new state-of-the-art tools: PandoraPFA, ACTS, CLUE, Phoenix
  - Continuous Validation System to ensure everything keeps working together with high performance
