

# PANEL DISCUSSION

- *Please comment on any, or all, of the topics we heard today:*
  - *Is there significant discovery potential?*
  - *Is it a good match to the unique capabilities of CEBAF at 20-24 GeV?*
  - *Is it technically feasible?*
- *Which topic, or topics, do you see as particularly compelling? Do these provide substantial justification for an energy upgrade of CEBAF?*
- *Are there topics that you think deserve consideration but were not included in the workshop program?*
- How do the topics presented today compare with experimental programs elsewhere (competitive, synergetic, complimentary)?
- Will any of the topics presented potentially attract users from outside the lab?
