

The CaFe Experiment: Isospin Dependence of Short-Range Correlations in Nuclei

C. Yero
(On behalf of the CaFe collaboration)

Hall C Summer Collaboration Meeting

June 17, 2022

Proposal: PR12-16-004

Which nucleons form SRC pairs?

SRC pairs:

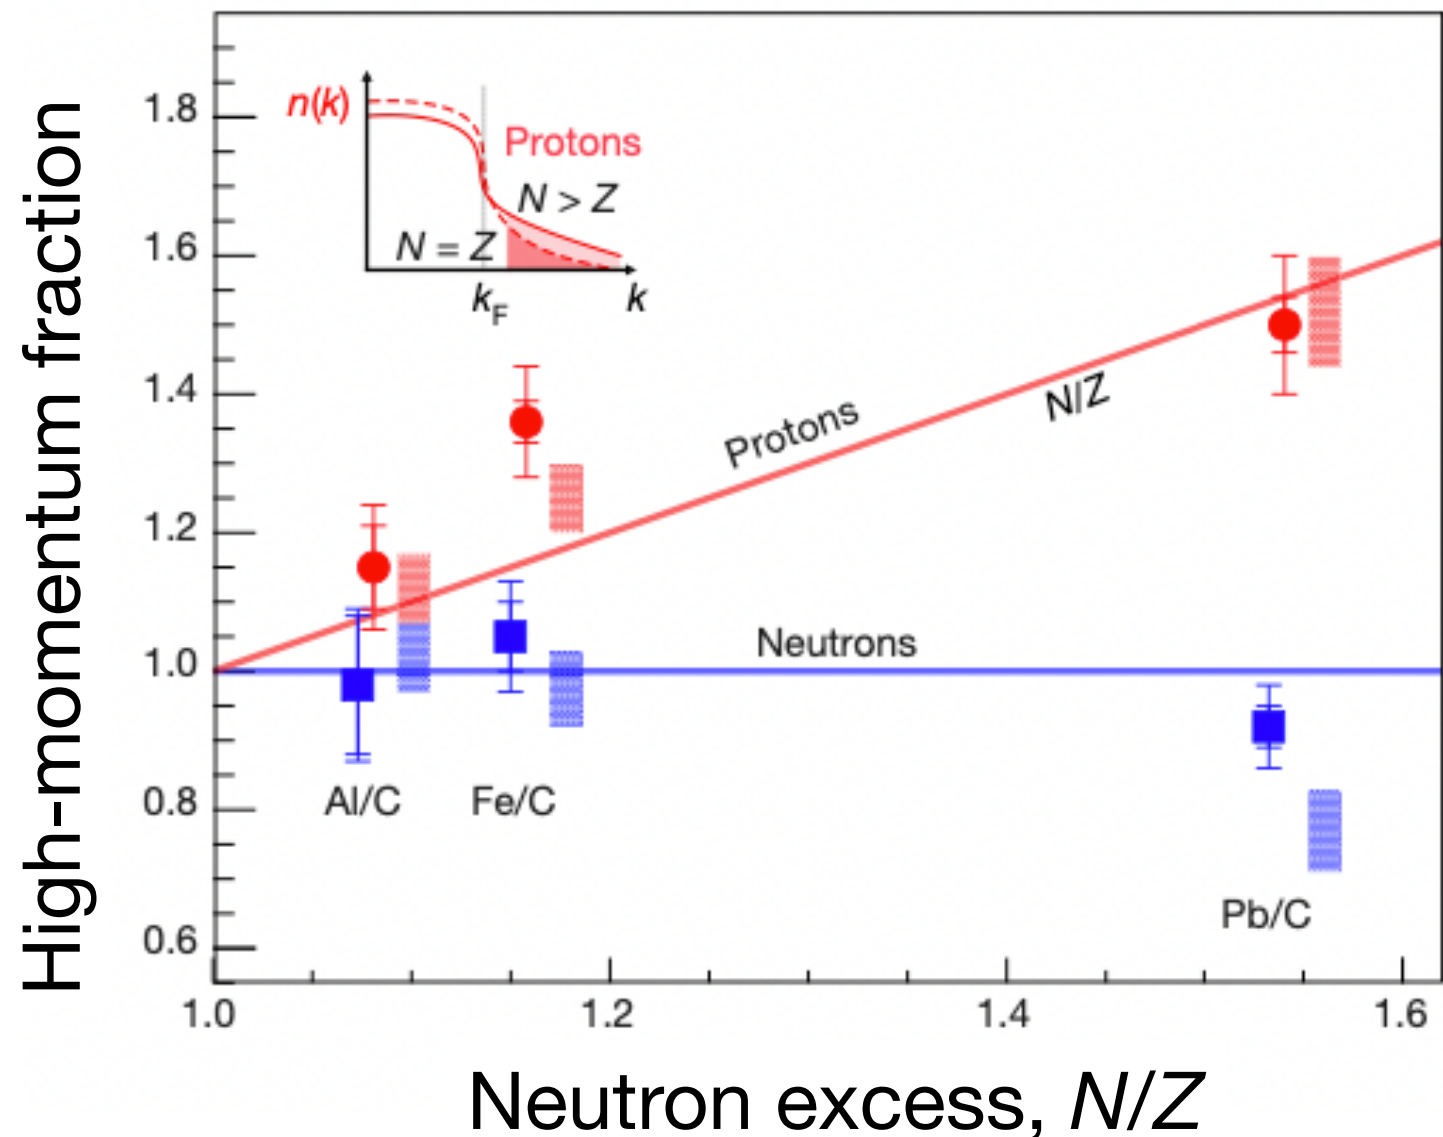

- account for almost all high momentum nucleons in nuclei
- are predominantly np

→ Which nucleons form pairs

→ How does adding neutrons speed up protons?

→ A vs N/Z dependence?

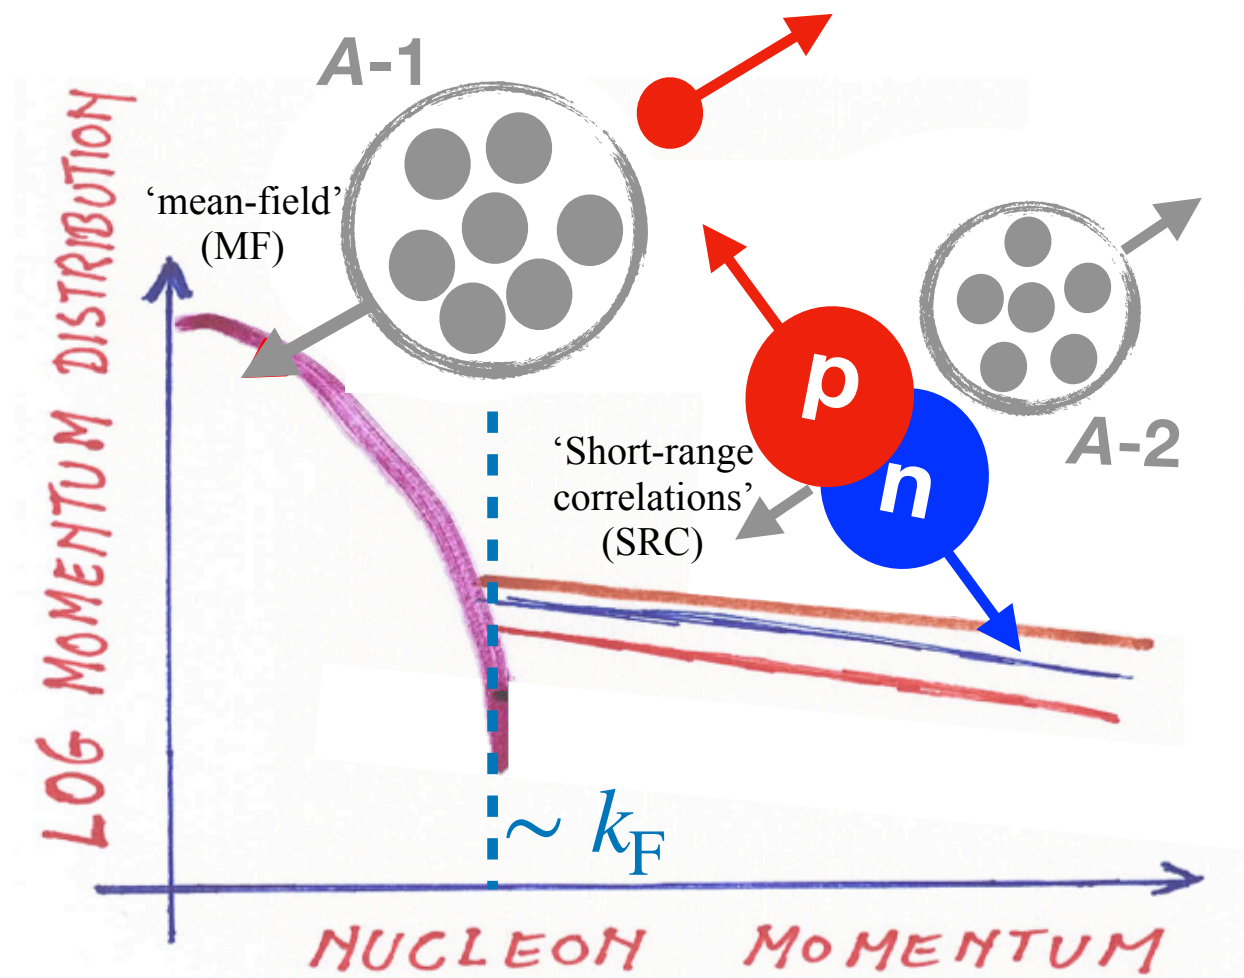

Please refer to [Dien Nguyen's Talk](#) (Hall C 2022 Winter Meeting) for details !

M. Duer et al. (CLAS collaboration), Nature 560, 617 (2018)

What will CaFe measure ?

$A(e, e'p)$

MF : $k_r < 250$ MeV/c
 SRC : $k_r > 300$ MeV/c

High-momentum fraction:

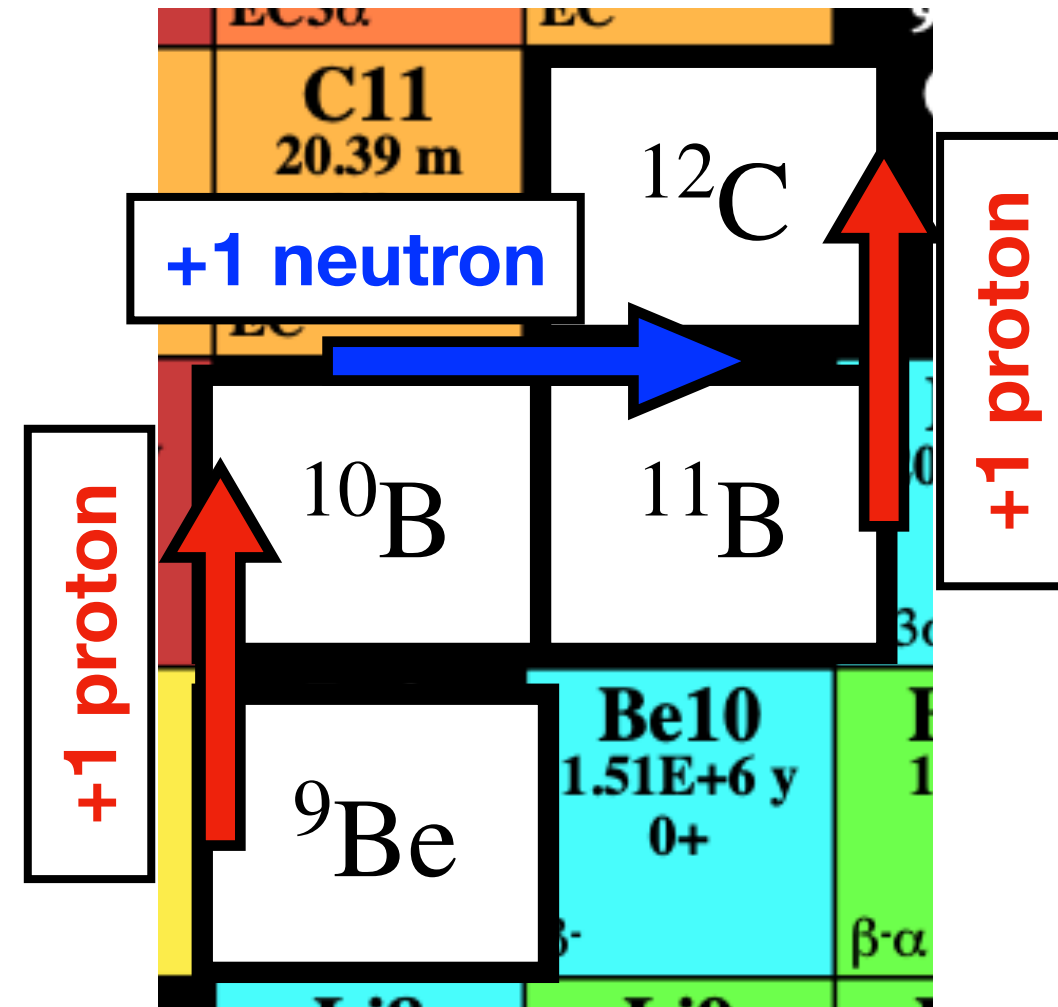

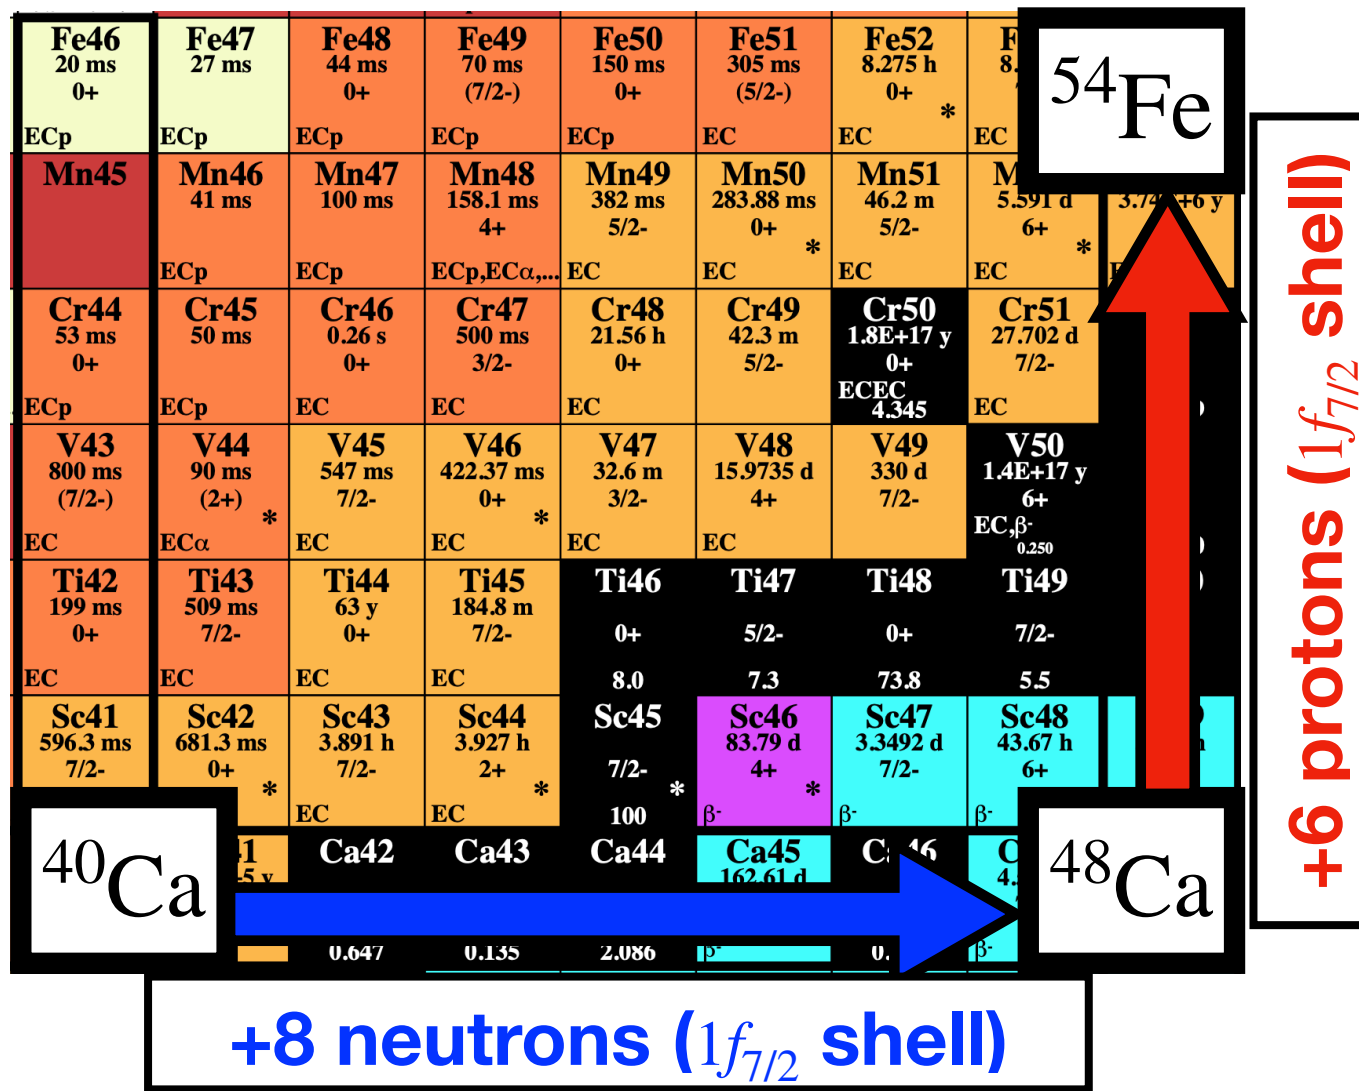

$$\frac{A(e, e'N)^{SRC} / A(e, e'N)^{MF}}{^{12}\text{C}(e, e'N)^{SRC} / ^{12}\text{C}(e, e'N)^{MF}}$$

SRC (high-pm kin)

MF (low-pm kin)

Ebeam (GeV)	E' (GeV) SHMS	θ_e Degree SHMS	$ P_p $ GeV HMS	θ_p Degree HMS	Pm GeV	Q2_center
10.6	8.55	8.3	1.325	66.4	0.4	2.1
10.6	8.55	8.3	1.820	48.3	0.15	2.1

Which Nuclei to Investigate ?

Which nucleons form pairs?

- How does adding $+8$ $1f_{7/2}$ neutrons to a $2s1d$ closed shell ^{40}Ca change the proton pairing?
- How does adding $+6$ $1f_{7/2}$ protons to ^{48}Ca change the proton pairing?
- What about $1p$ nuclei? $^9\text{Be} \rightarrow ^{10}\text{B} \rightarrow ^{11}\text{B} \rightarrow ^{12}\text{C}$

Projected CaFe Results

Which nucleons form pairs?

- How does adding $+8$ $1f_{7/2}$ neutrons to a $2s1d$ closed shell ^{40}Ca change the proton pairing?
- How does adding $+6$ $1f_{7/2}$ protons to ^{48}Ca change the proton pairing?
- What about $1p$ nuclei? $^9\text{Be} \rightarrow ^{10}\text{B} \rightarrow ^{11}\text{B} \rightarrow ^{12}\text{C}$
