2. Fix Para.

HEFT

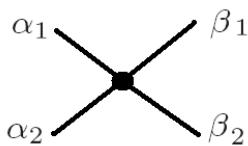

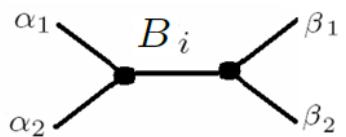

1. Bulid Model

Resonance

(Mass , Width, Pole  
position, Coupling)

3. Extract Phys.

Unphysical  $\pi$   
mass ??

HEFT:

1. Build a Hamiltonian model;

2. If Experimental data available, we fit  
Experimental data to fix the parameters in  
the model;

If Lattice data available (close to physical  
pion mass), we fit these data;

If both, we can use both of them constraint  
the model parameters.

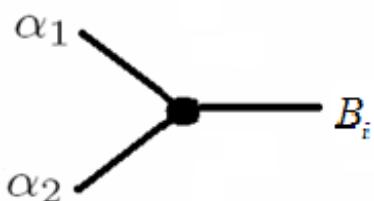

If we only have Lattice data with  
unphysical pion mass, we need another  
parameter for the mass dependence, such  
as mass slope.

3. From the fixed Hamiltonian, we can study  
the properties of Resonance. Especially,  
from the eigenvector in the finite volume, we  
can estimate the internal structure of the  
hadron.

# For N\*(1535)

For One bare states:  $\bar{\chi}(0) |\Omega\rangle = |B_0\rangle$

Correlation Function:  $G_\chi(t, \mathbf{p}) = \sum_{\mathbf{x}} e^{-i\mathbf{p} \cdot \mathbf{x}} \langle \bar{\Omega} | \chi(\mathbf{x}, t) \bar{\chi}(0, 0) | \Omega \rangle ,$

$$G_\chi(t) = \sum_i |\langle \Omega | \chi | E_i \rangle|^2 e^{-E_i t}, \quad G_{B_0}(t) = \sum_i |\langle B_0 | E_i \rangle|^2 e^{-E_i t}$$

Contamination function:  $C_{B_0}(t) = \frac{1}{G_{B_0}(t)} \sum_{i \neq B_0} |\langle B_0 | E_i \rangle|^2 e^{-E_i t}$

Define “Contamination Function”  
to compare HEFT VS LQCD

If  $|E_{B_0}\rangle$  is a ground state,  
 $C_{B_0} \sim 0$ .

If  $|E_{B_0}\rangle$  is a excited state,  
 $C_{B_0}(t)$  will have a minimal  
value as function of t.

# For N\*(1535)

For One bare states:  $\bar{\chi}(0) |\Omega\rangle = |B_0\rangle$

Correlation Function:  $G_\chi(t, \mathbf{p}) = \sum_{\mathbf{x}} e^{-i\mathbf{p}\cdot\mathbf{x}} \langle \bar{\Omega} | \chi(\mathbf{x}, t) \bar{\chi}(0, 0) | \Omega \rangle ,$

$$G_\chi(t) = \sum_i |\langle \Omega | \chi | E_i \rangle|^2 e^{-E_i t}, \quad G_{B_0}(t) = \sum_i |\langle B_0 | E_i \rangle|^2 e^{-E_i t}$$

Contamination function:  $C_{B_0}(t) = \frac{1}{G_{B_0}(t)} \sum_{i \neq B_0} |\langle B_0 | E_i \rangle|^2 e^{-E_i t}$

Define “Contamination Function” to compare HEFT VS LQCD

If  $|E_{B_0}\rangle$  is a ground state,  
 $C_{B_0} \sim 0$ .

If  $|E_{B_0}\rangle$  is a excited state,  
 $C_{B_0}(t)$  will have a minimal value as function of t.

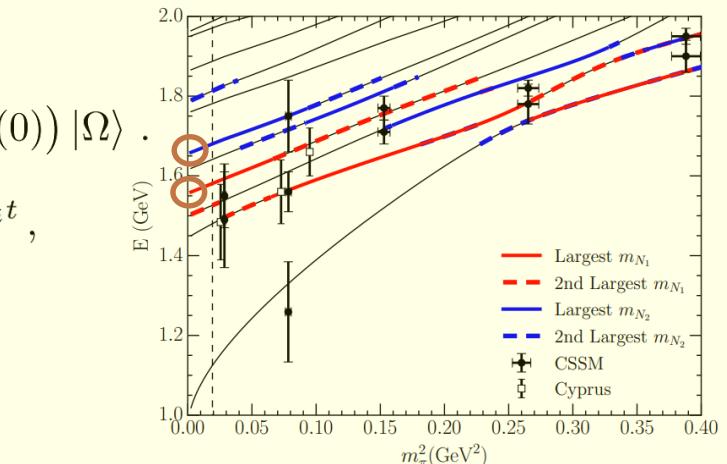

For Two bare states:  $(\alpha^* \bar{\chi}_1 + \beta^* \bar{\chi}_2) |\Omega\rangle = \alpha^* |N_1\rangle + \beta^* |N_2\rangle ,$

Correlation Function:  $G_j(\mathbf{p}, t) = \sum_{\mathbf{x}} e^{-i\mathbf{p}\cdot\mathbf{x}} \langle \bar{\Omega} | (\alpha_j \chi_1(\mathbf{x}, t) + \beta_j \chi_2(\mathbf{x}, t)) (\alpha_j^* \bar{\chi}_1(0) + \beta_j^* \bar{\chi}_2(0)) | \Omega \rangle ,$

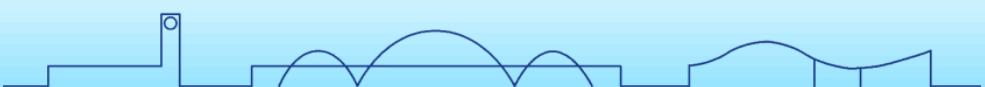

$$G_j(t) = \sum_i (\alpha_j \langle N_1 | + \beta_j \langle N_2 |) |E_i\rangle \langle E_i| (\alpha_j^* |N_1\rangle + \beta_j^* |N_2\rangle) e^{-E_i t} ,$$

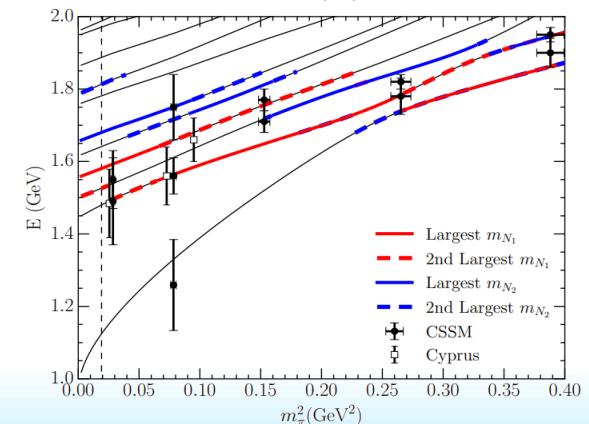

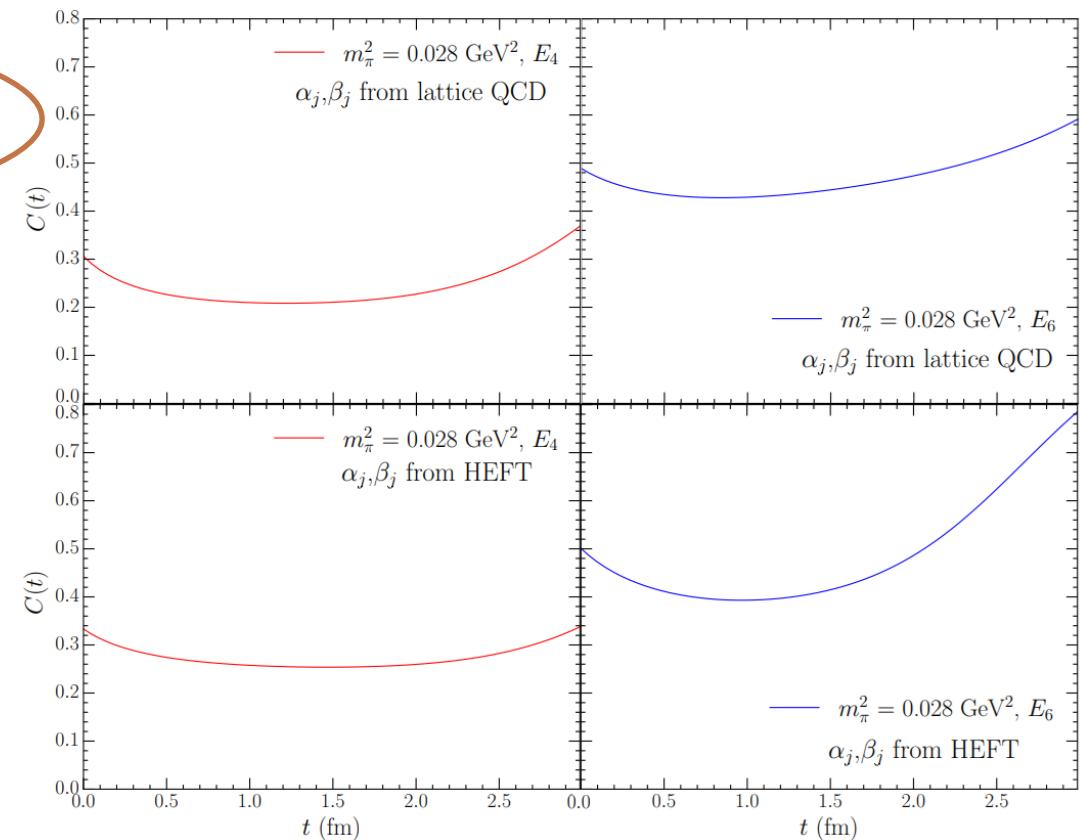

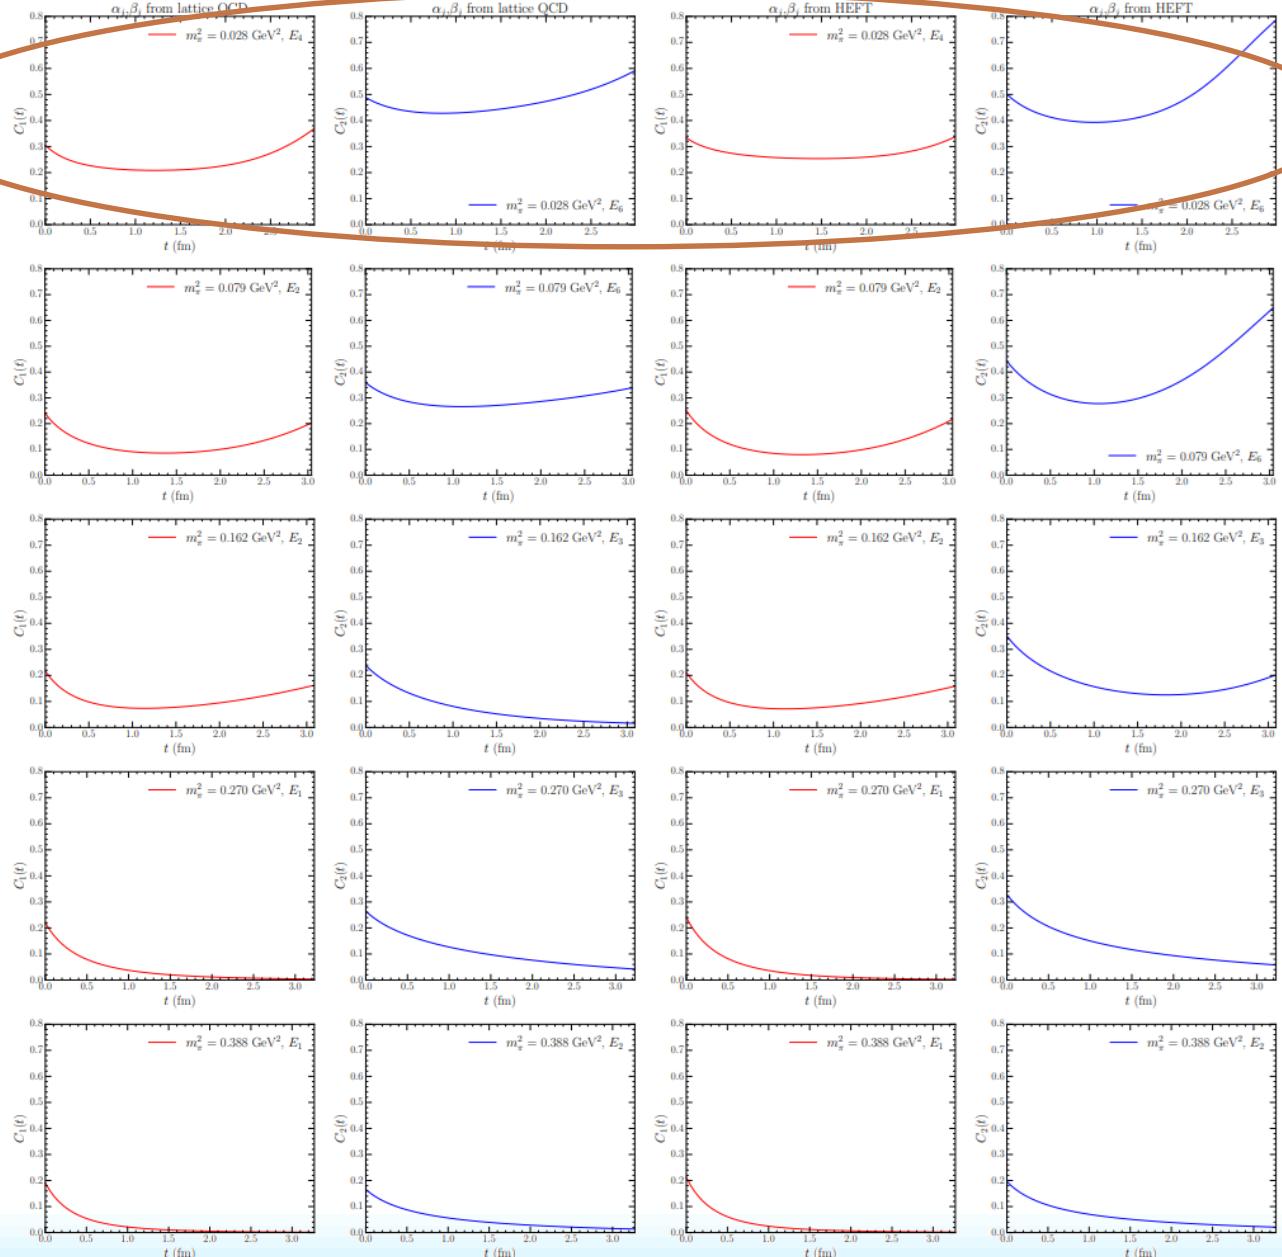

$$= \sum_i |\alpha_j \langle N_1 | E_i \rangle + \beta_j \langle N_2 | E_i \rangle|^2 e^{-E_i t} .$$

Contamination function:  $C_j(t) = \frac{1}{G_j(t)} \sum_{i \neq N_1, N_2} (\alpha_j \langle N_1 | E_i \rangle + \beta_j \langle N_2 | E_i \rangle)^2 e^{-E_i t}$

$$\begin{aligned} \alpha_1 &= \langle N_1 | E_{N_1} \rangle, & \beta_1 &= \langle N_2 | E_{N_1} \rangle, \\ \alpha_2 &= \langle N_1 | E_{N_2} \rangle, & \beta_2 &= \langle N_2 | E_{N_2} \rangle. \end{aligned}$$

This result shows that  
HEFT is quite consistent  
with Lattice data.

# Summary

- Here we find that the interpretation of the two resonances as three-quark cores dressed by scattering-state dynamics is consistent with the  $L \sim 3$  fm lattice calculations.
- To extend to the  $L \sim 2$  fm and 4 fm are both quiet good.
- We define a “contamination function” related to the overlap of bare states with eigenstates, then we compare this function by Lattice input and HEFT results.
- All of these consistent comparisons show that the results of HEFT correctly reflect the structure of hadron from experimental and lattice data.

# Outlook

- The most big problem is too many parameters.
- We have 21 free parameters! Data driven motivation.
- Now we want to improve our model by including  $K\Sigma$  channel, i.e., it will be four coupled channels.
- By using SU(3) symmetry, we set the fixed relationship of coupling constants of bare state with channels, and channels.
- Correspondingly, the fitting will be much hard.
