

Helicity couplings from data

- What is the data situation, especially at higher photon virtualities?
- Helicity couplings at the pole
- Helicity couplings from Breit-Wigner parametrizations
- Discussion and questions

Electroproduction Analysis efforts

- **MAID**: electroproduction of pions, eta mesons, and kaons in separate approaches [[Tiator 2007](#)]
- **JM (JLab)** approach: single-pion analysis, double pion analysis [[Moiseev, PRC 2023](#)]; Also: unitary isobar model
- **ANL-Osaka**: Single-pion electroproduction, using multi-channel model. [[Kamano, Lee, Nakamura, Sato, 2016](#)]
- **JBW**: simultaneous analysis of multiple electroproduction final states, using multi-channel model
- **Bonn-Gatchina**: Upcoming calculations

JBW Electroproduction data base

Type	$N_{\text{data}}^{\pi^0 p}$	$N_{\text{data}}^{\pi^+ n}$	$N_{\text{data}}^{\eta p}$	$N_{\text{data}}^{K\Lambda}$
● ρ_{LT}	45	—	—	—
■ $\rho_{LT'}$	2768	5068	—	—
◆ σ_L	—	2	—	—
▲ $d\sigma/d\Omega$	48135	44266	3665	2055
▼ $\sigma_T + \epsilon\sigma_L$	384	182	—	204
○ σ_T	30	2	—	—
□ σ_{LT}	373	138	—	204
◇ $\sigma_{LT'}$	214	208	—	156
△ σ_{TT}	327	123	—	204
▽ K_{D1}	1527	—	—	—
● P_Y	—	2	—	—
Total	53804	49989	3665	2823

- Data base grown over decades with recent input mostly by CLAS, MAMI.
- Far from complete: Kinematic gaps & consistency issues. Need to combine information from different (W, Q^2) regions
- Need to combine information from simultaneous analysis of different final states ($\pi N/\eta N/K Y/\pi\pi N, \dots$) to extract resonance helicity couplings

[Mai et al., 2022]

$$M_{1-}^{1/2} (N(1440))$$

Roper Multipole

($W=1.38$ GeV fixed)

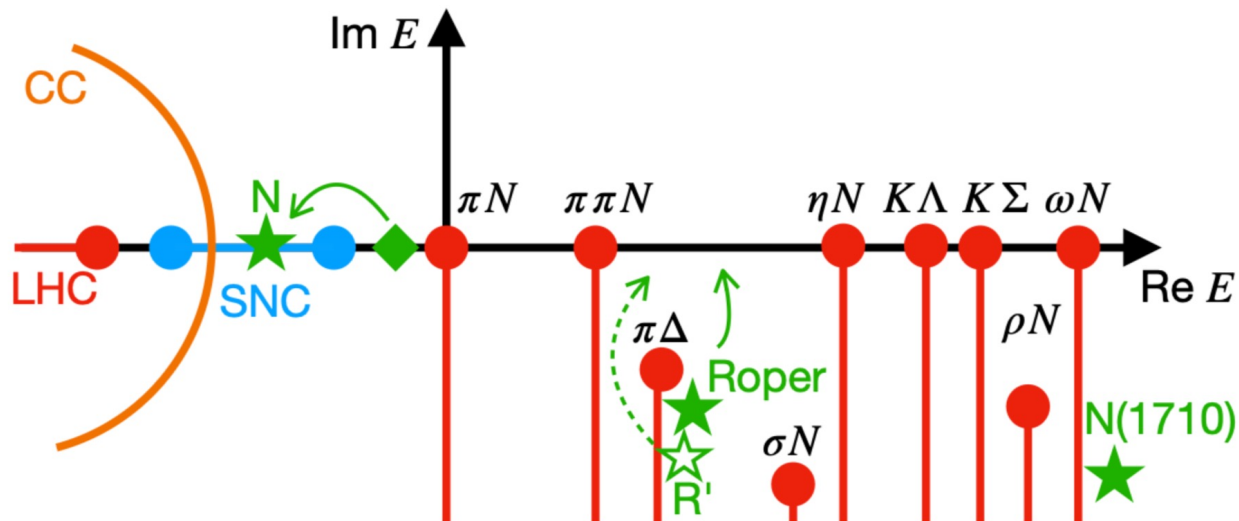

- Zero-transition (agrees with MAID)
- Extensive exploration of parameter space reveals ambiguities in PWA and reflects systematic uncertainties

(Strategy 1 only)

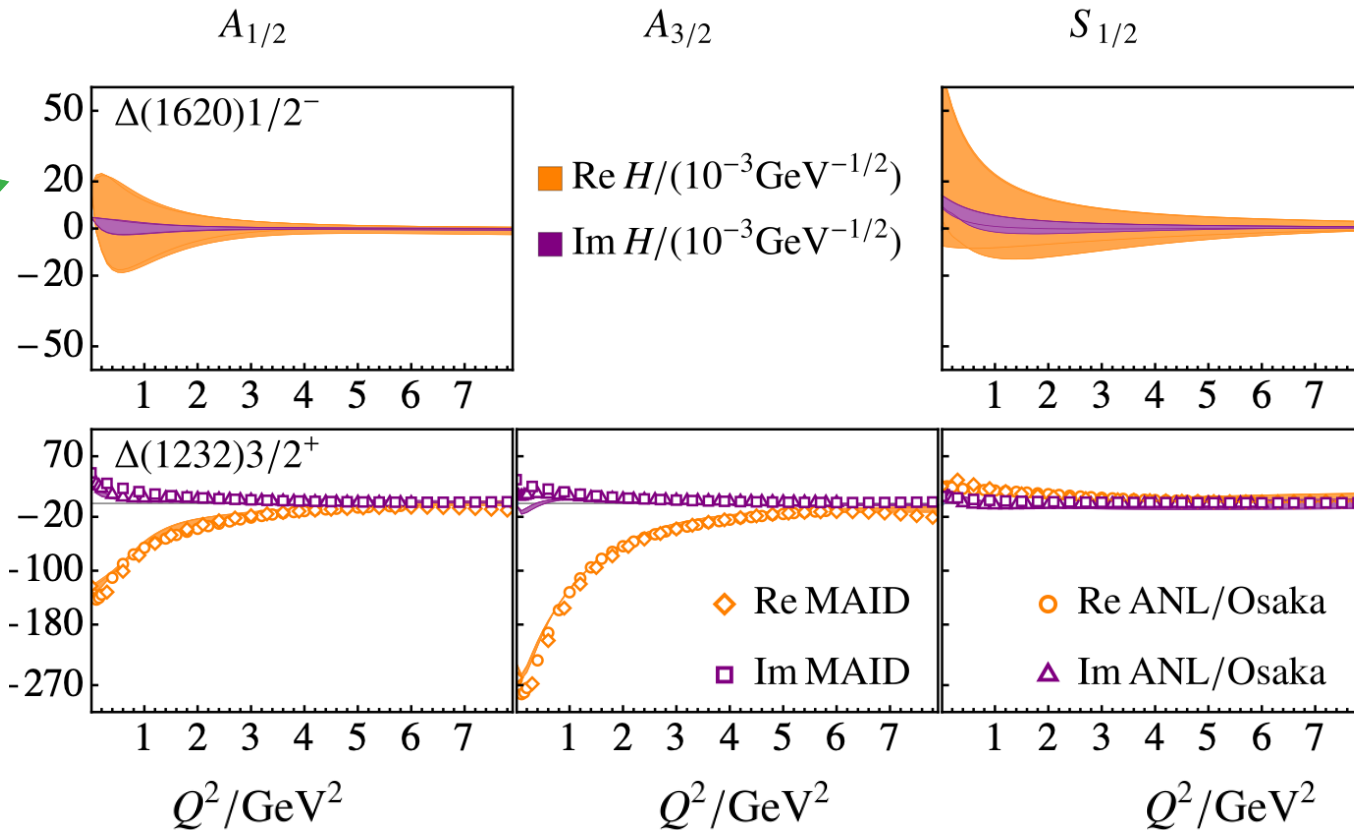

Partial-Wave Analytic structure

- Branch points indicate thresholds
- Partial-wave amplitudes have more cuts than plane-wave amplitude
- Example: The structure of the P11 amplitude

Helicity Couplings at pole

- (Selected results) [\[Yu-Fei Wang et al., 2024\]](#), Hergenrather, Mai, Mart, Meissner, Roenchen, Workman, MD

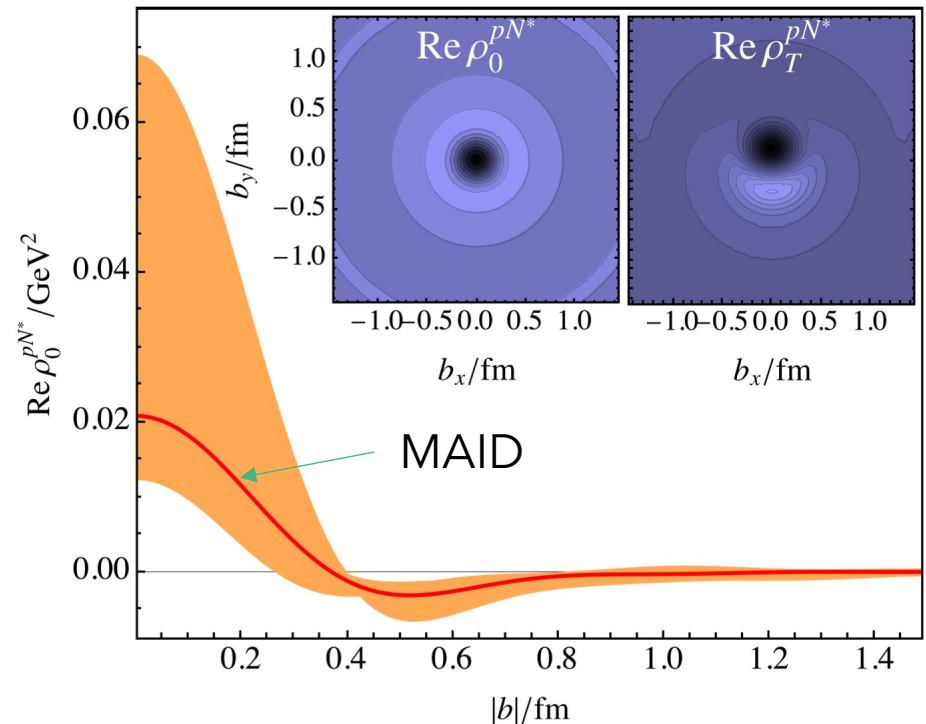

Compares qualitatively with [\[Moiseev et al., 2022\]](#)

Results for the Roper resonance

Charge density structure

[approx./ following Tiator et al., (2009)]

- Reaction independent; background independent
- Always complex
- Often, $\text{Im } A \ll \text{Re } A$
- Usually hard to compare to by QCD approaches

Breit-Wigner helicity couplings

$M_{1-}^{1/2} (N(1440))$

- Extract Helicity Couplings (HCs) by fitting W -dependent Breit-Wigner-like functions, for fixed Q^2 .
- Background function (W -dep.)?
- Reaction dependence (of background term)?
- Overlapping resonances (1535 & 1650)?
- Dependence of W range used for fit?
- Example: MAID choice [\[arXiv:0909.2335\]](https://arxiv.org/abs/0909.2335):

$$t_{\gamma\pi}(W) = t_{\gamma\pi}^B(W) + t_{\gamma\pi}^R(W)$$

$$t_{\gamma\pi}^{B,\alpha}(W, Q^2) = v_{\gamma\pi}^{B,\alpha}(W, Q^2) [1 + it_{\pi N}^\alpha(W)]$$

$$t_{\gamma\pi}^{R,\alpha}(W, Q^2) =$$

$$\bar{A}_\alpha^R(W, Q^2) \frac{f_{\gamma N}(W) \Gamma_{tot} M_R f_{\pi N}(W)}{M_R^2 - W^2 - iM_R \Gamma_{tot}} e^{i\phi_R}$$

Discussion points

- Data base questions: Need for high- Q^2 data & polarization observables (talk Lucia Lanza); data base consistency challenges
- JM model/UI Jlab models report consistent BW helicity couplings from different final states, for some resonances. (Talk Moakeev)
- Something similar should be possible for the JBW model: Unique opportunity because different final states are analyzed within the very same amplitude. (Talk Doering)
- How to agree on consistent hadronic decay branching ratios of resonances (helicity couplings strongly depend on this)?
- What is a good background model to be used?
- Use Q^2 dependent amplitudes with variable n for Q^n to let data choose the scaling of helicity couplings & multipoles (?)
