

# RG-D Initial Analysis and Alignment Status

Matthew Maynes

CLAS Collaboration Meeting

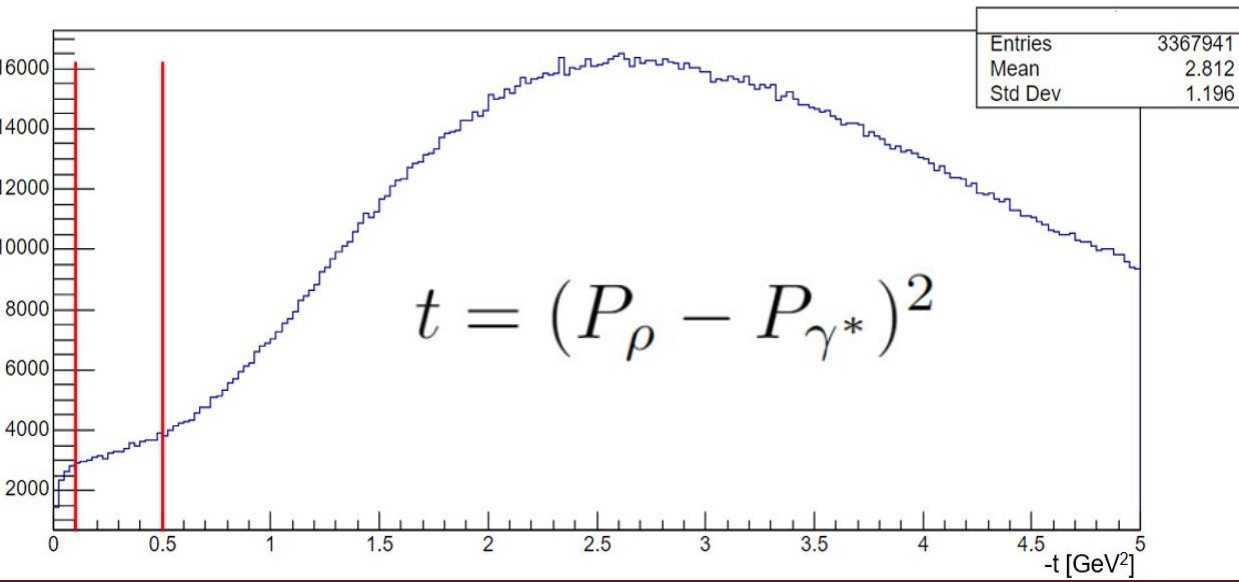

November 8<sup>th</sup>, 2023

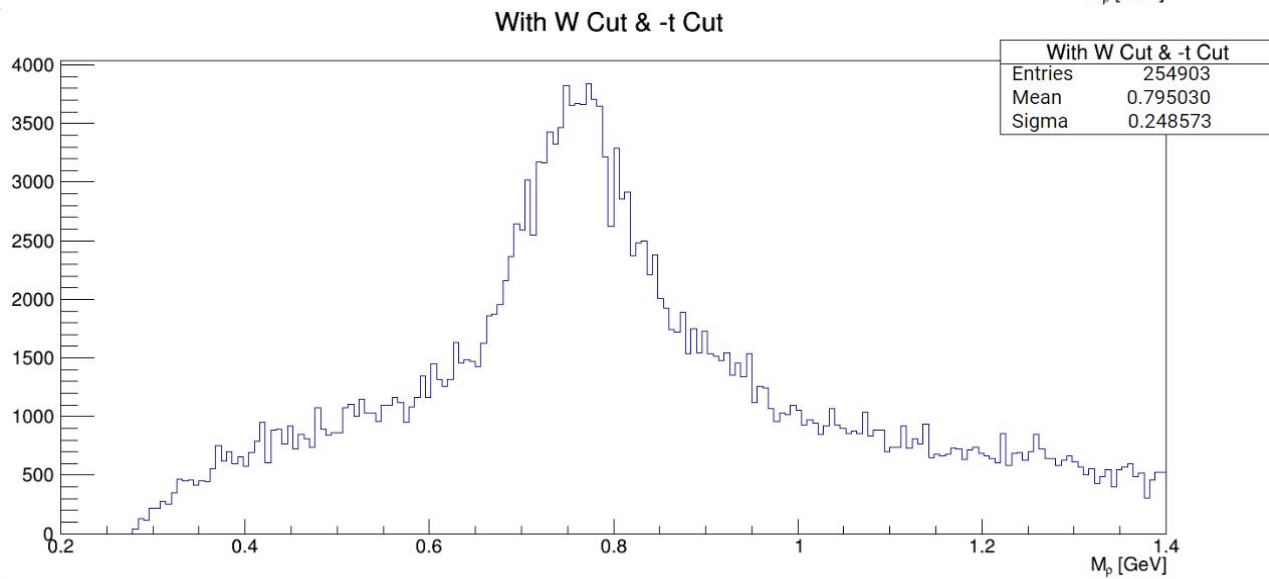

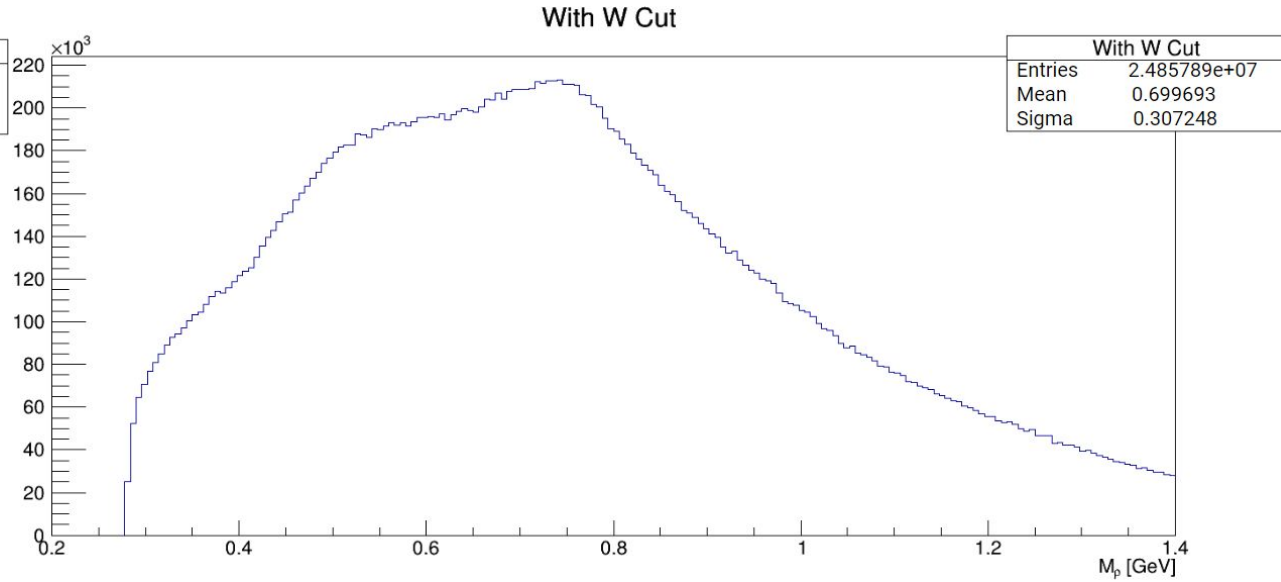

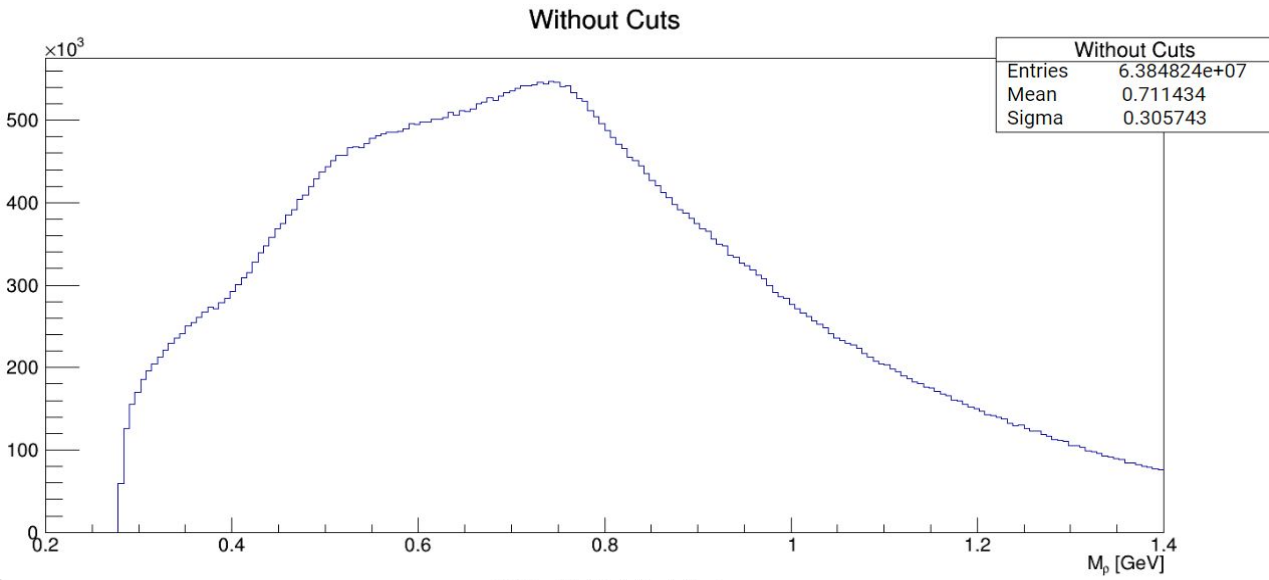

- ❖ First look at RG-D data:
  - $\rho^0$  Electro-production Kinematics
- ❖ Alignment Status

# $\rho^0$ Production Kinematics

- Kinematics using an outbending CxC run (18454) for exclusive diffractive  $\rho^0$  electroproduction off nuclei.

# $\pi^+\pi^-$ Invariant Mass

# DC Alignment Status

- ❖ The Clas12 Drift Chamber System is made of 3 regions  $R_1$ ,  $R_2$  and  $R_3$ :
  - Each Region contains 2 superlayers.
  - Each superlayer is made of 6 layers of sense wires.
- ❖ Alignment is done by a series of translations and rotation to align the DC regions as designed in the nominal geometry:
  - 3 translations of all 3 regions range from 0.1 to 0.8 cm;
  - 2 rotations for all 3 regions at 0.2 degrees.

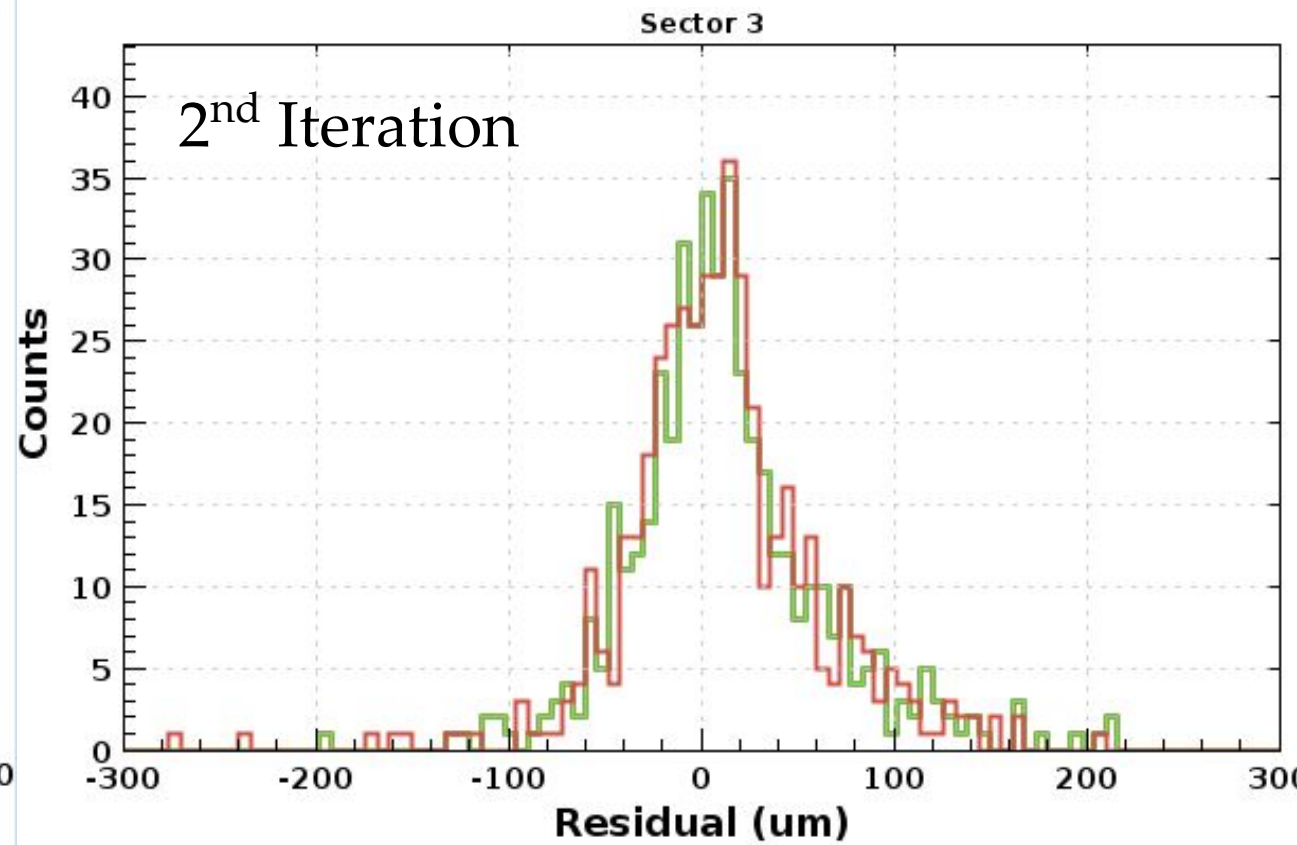

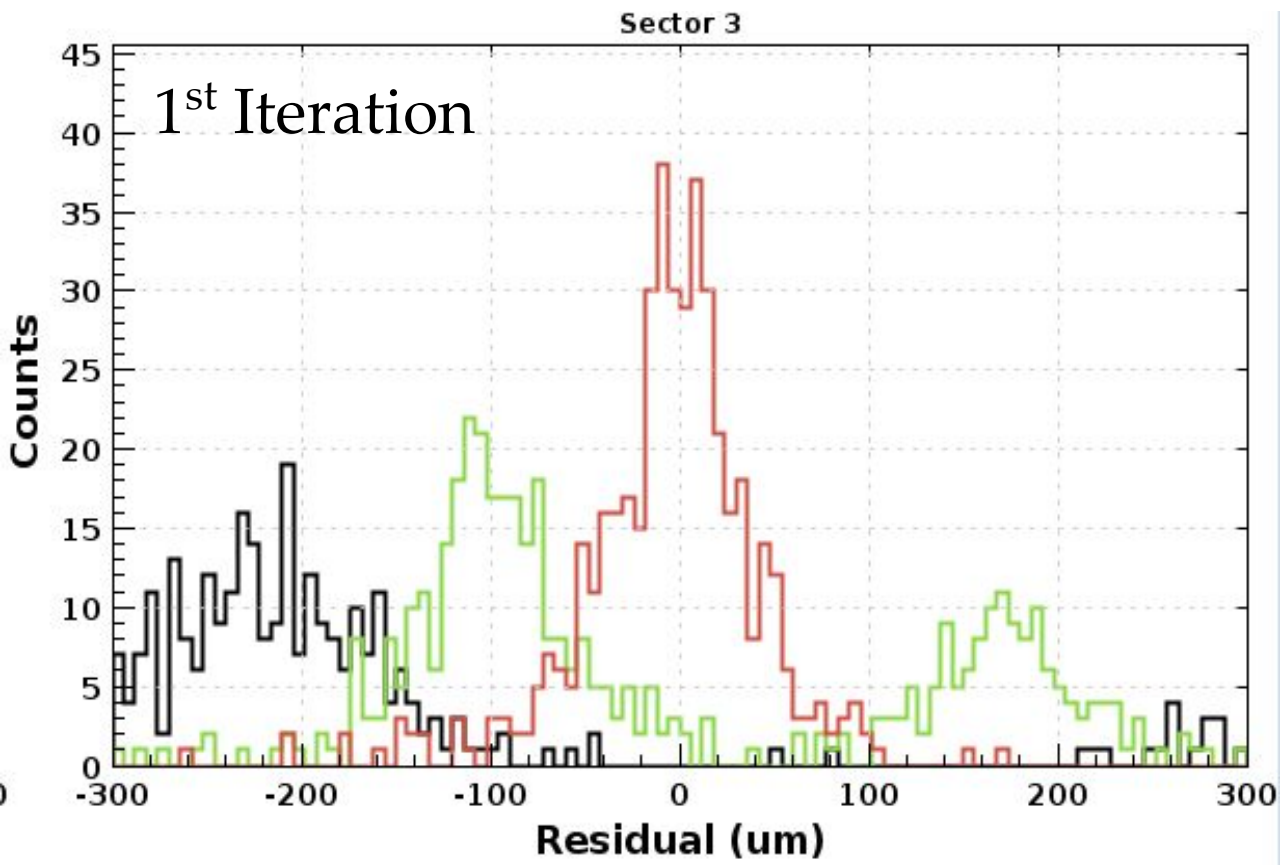

# DC Alignment Status

- ❖ The Clas12 Drift Chamber System is made of 3 regions  $R_1$ ,  $R_2$  and  $R_3$ :
  - Each Region contains 2 superlayers.
  - Each superlayer is made of 6 layers of sense wires.
- ❖ Alignment is done by a series of translations and rotation to align the DC regions as designed in the nominal geometry:
  - 3 translations of all 3 regions range from 0.1 to 0.8 cm;
  - 2 rotations for all 3 regions at 0.2 degrees.
- ❖ The RG-D alignment was performed using a 1 nA, zero field, empty target run.

# Some Results after First & Second Iterations

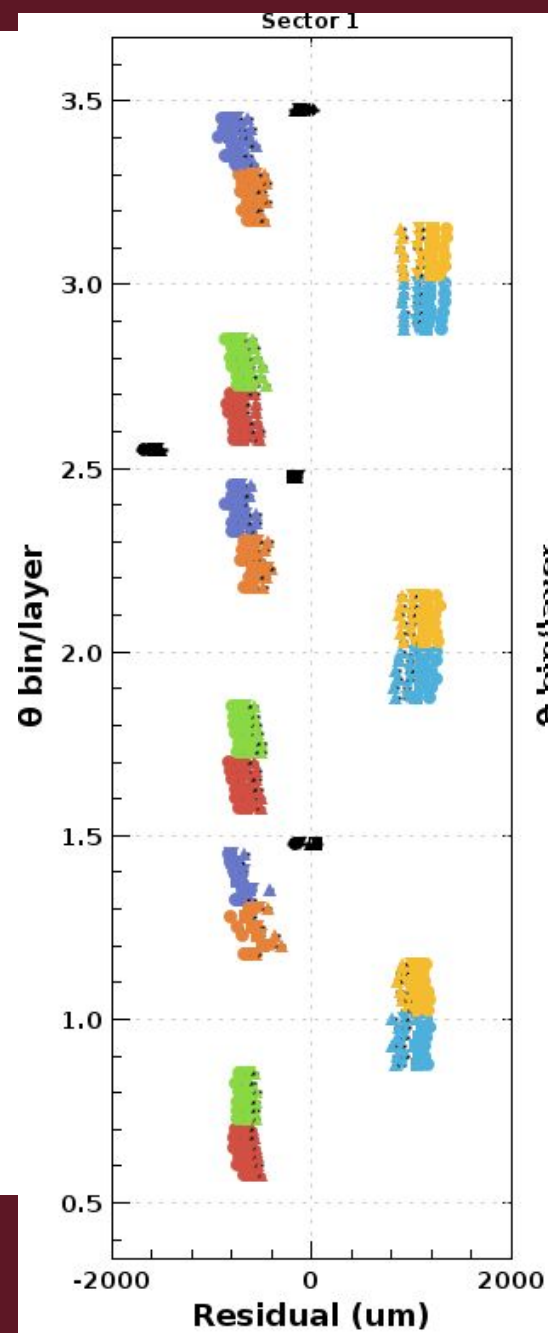

- ❖ Red line is the result of the first iteration.
- ❖ Green line is the result with the RG-C alignment setting.
- ❖ Black line represents the nominal geometry.

# Residuals Dependencies

- ❖ Colorful dots represent the polar  $\theta_e$  angle bins.
- ❖ Black dots represents the vertex shifts in tens of microns.
  - The shift is with regard to a known target position.
- ❖ Different symbols shows the  $\phi_e$  angle bins.

Before Alignment

First Iteration

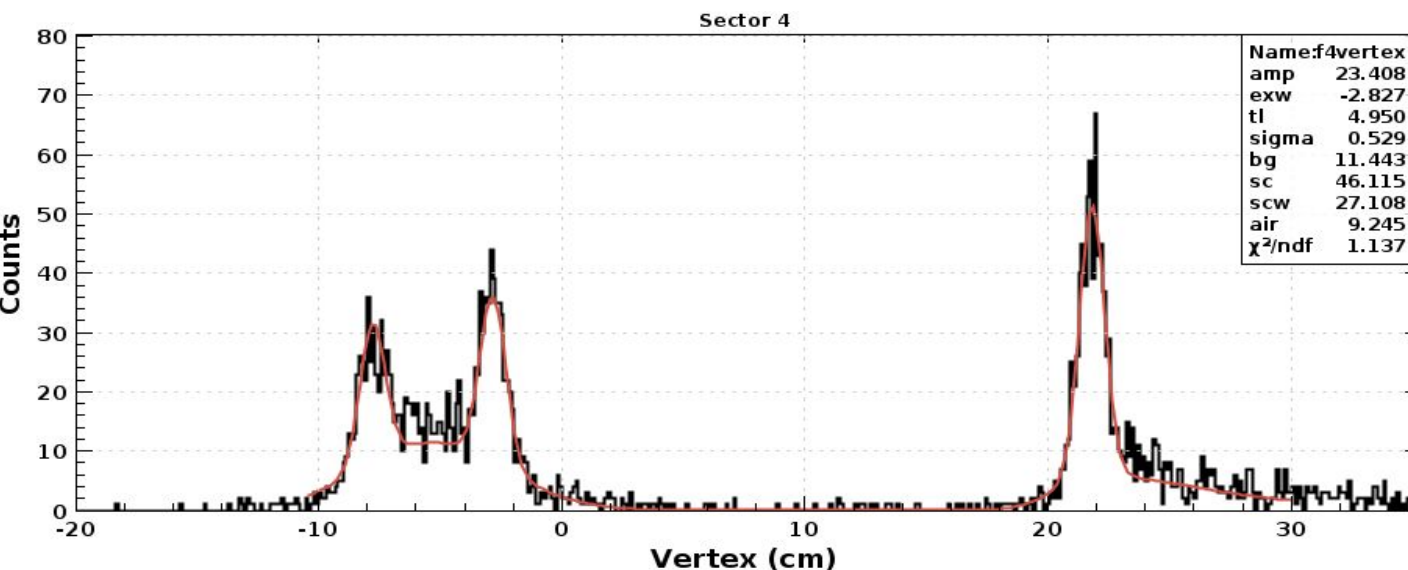

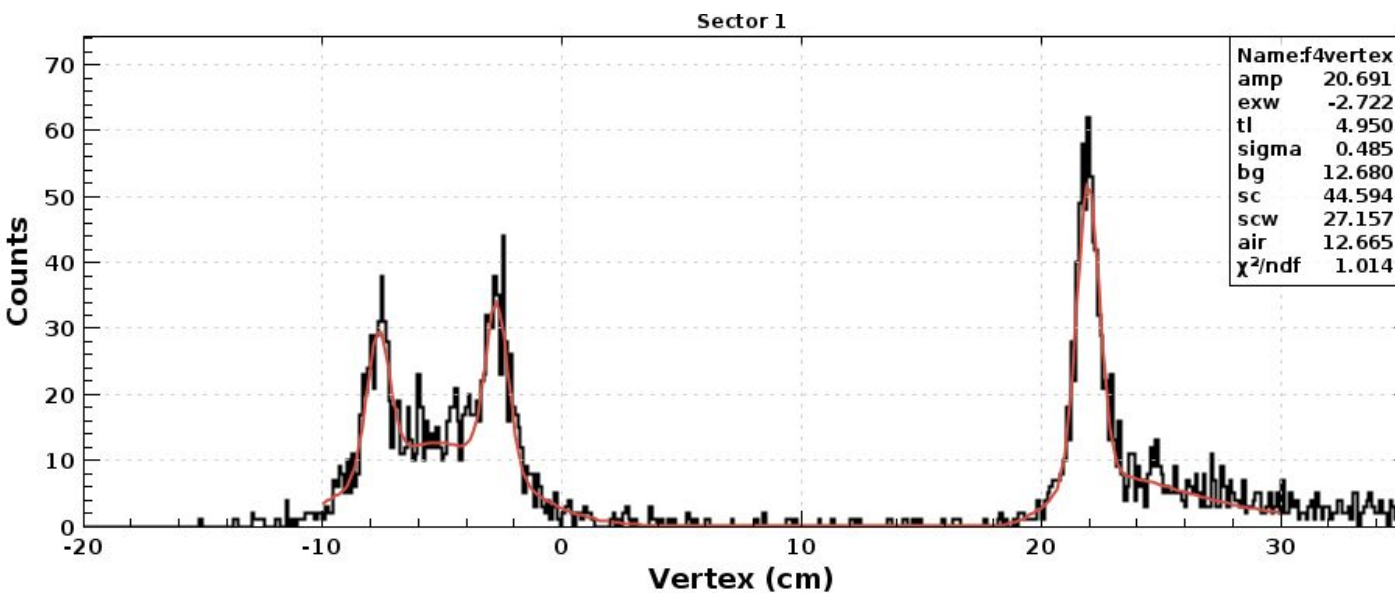

Second Iteration

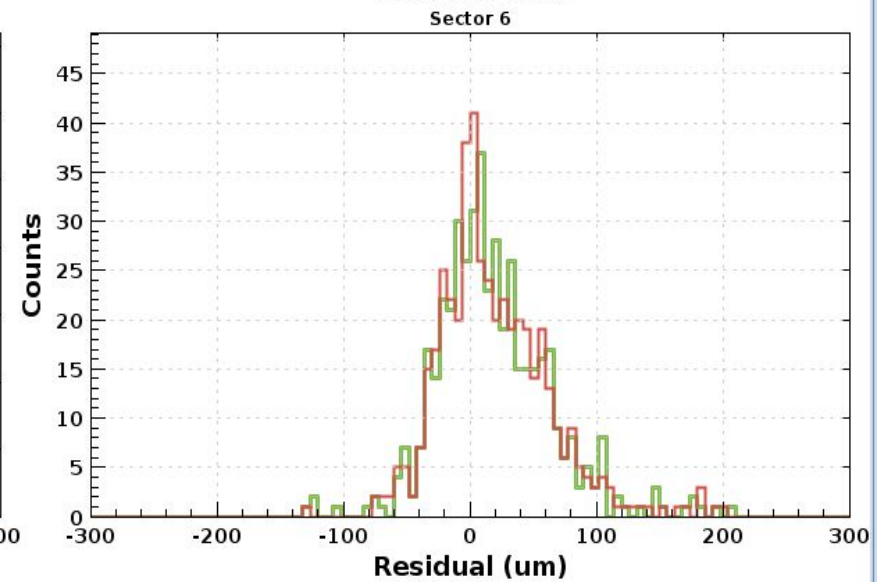

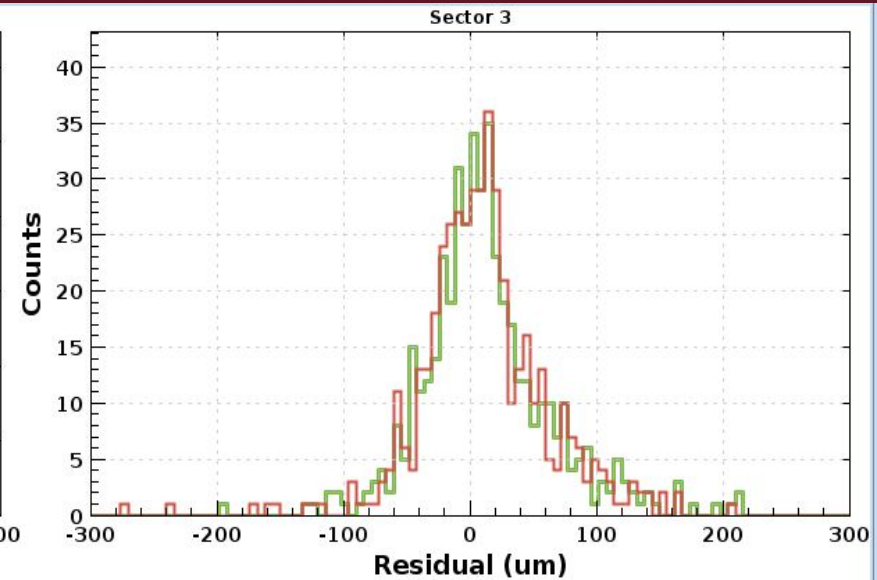

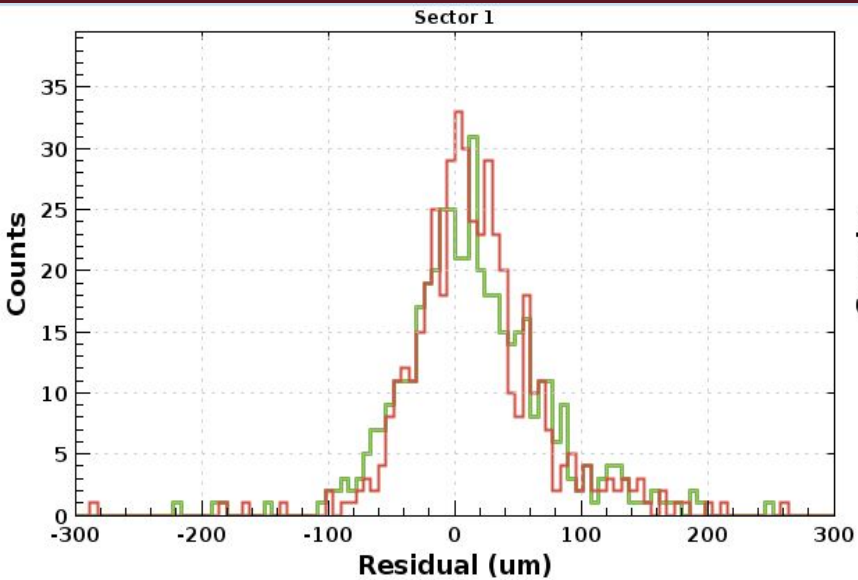

# Electron z-Vertex Distributions

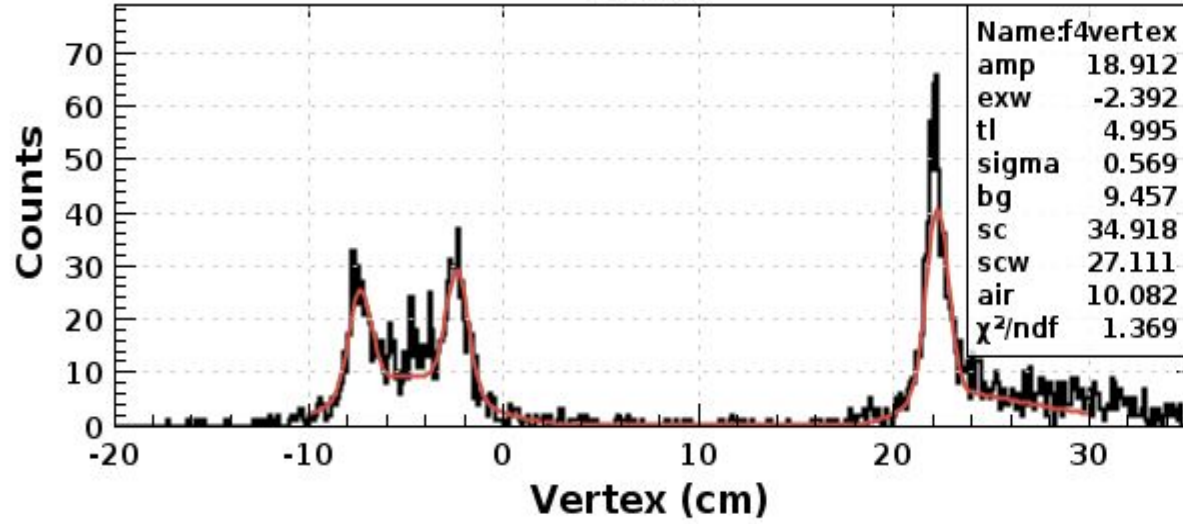

- ❖ From left to right along the beamline:
  - The first peak corresponds to the upstream window of empty cryogenic cell.
  - The second peak corresponds to the downstream window of empty cryogenic cell.
- ❖ The downstream peak represents the scattering chamber exit window.

# Backup Slides

Sector 2

Sector 3

Sector 5

Sector 6

- The amplitudes of the final peak failed as a result of the final translation. These results will be corrected in the final alignment.
