

An overview of the **muses** cyberinfrastructure and what it can do for you

Veronica Dexheimer

★ Original muses team

PI and co-PIs

1. Nicolas Yunes; University of Illinois at Urbana-Champaign; **PI**
2. Jacquelyn Noronha-Hostler; University of Illinois at Urbana-Champaign; co-PI
3. Jorge Noronha; University of Illinois at Urbana-Champaign; co-PI
4. Claudia Ratti; University of Houston; co-PI and **spokesperson**
5. Veronica Dexheimer; Kent State University; co-PI

Senior investigators

1. Matias Carrasco Kind; National Center for Supercomputing Applications
2. Roland Haas; National Center for Supercomputing Applications
3. Timothy Andrew Manning; National Center for Supercomputing Applications
4. Andrew Steiner; University of Tennessee, Knoxville
5. Jeremy Holt; Texas A&M University
6. Gordon Baym; University of Illinois at Urbana-Champaign
7. Mark Alford; Washington University in Saint Louis
8. Elias Most; Princeton University

External collaborators

1. Helvi Witek; University of Illinois at Urbana-Champaign
2. Stuart Shapiro; University of Illinois at Urbana-Champaign
3. Katerina Chatzioannou; California Institute of Technology
4. Phillip Landry; California State University Fullerton
5. Reed Essick; Perimeter Institute
6. Rene Bellwied; University of Houston
7. David Curtin; University of Toronto
8. Michael Strickland; Kent State University
9. Matthew Luzum; University of Sao Paulo
10. Hajime Togashi; Kyushu University
11. Toru Kojo; Central China Normal University
12. Hannah Elnfer; GSI/Goethe University Frankfurt

Now we have 91+ collaborators

★ High-energy (QCD phase diagram) physics status

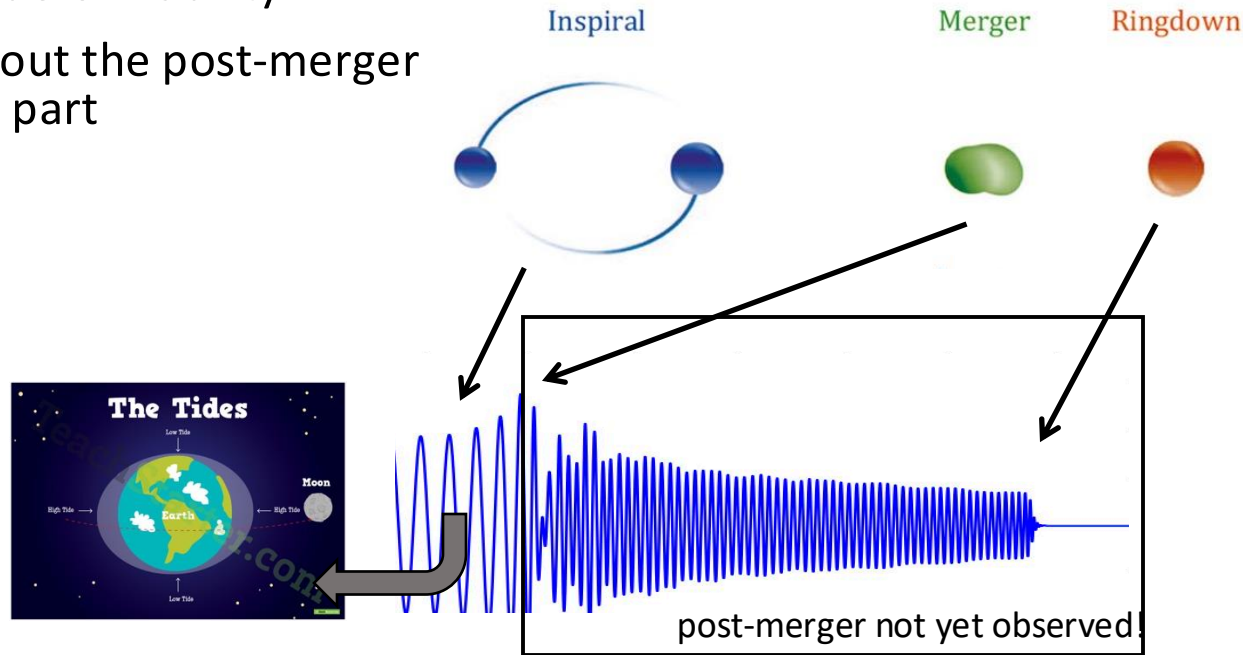

- * Current input from different (first-principle and effective) theories and experiments
 - lattice QCD
 - perturbative QCD
 - chiral effective field theory
 - heavy-ion collisions
 - low-energy nuclear physics
 - observations of neutron

Living Rev.Rel. 27 (2024) 1, 3
e-Print: [2303.17021](https://arxiv.org/abs/2303.17021) [nucl-th]

★ Gravitational wave data

- * Several measurements from neutron-star mergers but only GW170817 provided electromagnetic counterparts and a relevant measurement of the tidal deformability
- * Without the post-merger (hot) part

★ High-energy (QCD phase diagram) physics status

* Current input from different (first-principle and effective) theories and experiments

- lattice QCD
- perturbative QCD
- chiral effective field theory
- heavy-ion collisions
- low-energy nuclear physics
- observations of neutron

Living Rev.Rel. 27 (2024) 1, 3
e-Print: [2303.17021](https://arxiv.org/abs/2303.17021) [nucl-th]

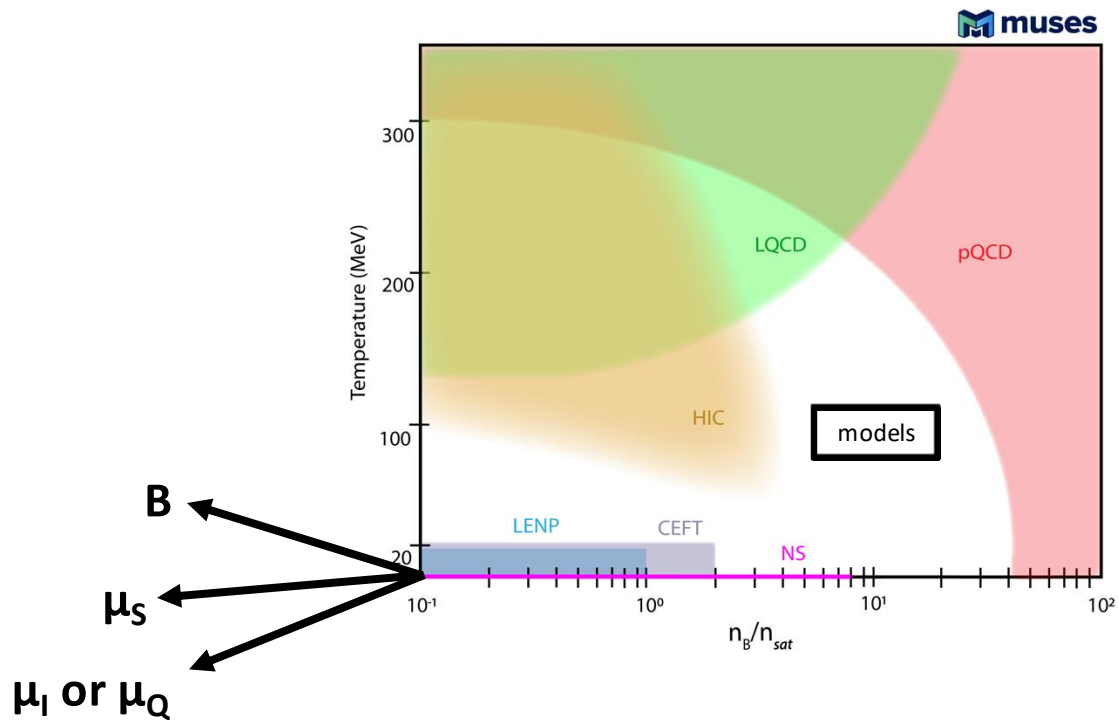

- binary neutron star mergers coming soon...

★ What about more physics (or dimensions)?

★ What about more physics (or dimensions)?

★ 5D Chiral Mean Field (CMF) model phase diagram curves

- * Equation of state for hadronic and quark matter with 1st order phase transition

- * Neutron-star matter also shown for comparison in different colors

$B=1.44 \times 10^{18} \text{ G}$ for neutron-star matter

$B=1.44 \times 10^{19} \text{ G}$ for neutron-star matter

Phys.Rev.D 108 (2023) 6, 063011

e-Print: [2304.02454](https://arxiv.org/abs/2304.02454)

★ **muses** cyberinfrastructure

- * **Modular Unified Solver of the Equation of State (EoS)**
- * Modular: different theories/models (modules) for the user to pick from **and modify**
- * Unified: different modules are combined in different ways to ensure maximal coverage of the phase diagram
- * Web-based tools and services that provide interactive interfaces to the Calculation Engine
- * Job management system and a deployment system that can be reproduced in other computing environments
- * EoS description modules and observable modules that link to experiments
- * Developers: physicists + computer scientists working together to develop optimized software in modern programming languages
- * Users: interested scientists from different communities, who provide input

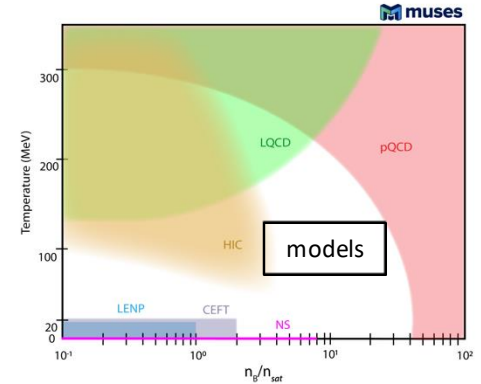

- * “If a MUSES module is a song, the Calculation Engine is not the album containing the song, it is the jukebox playing the songs.”

Andrew Manning

★ **muses** alpha release (September 2024)

- * We invited a limited number of users to test modules and provide feedback
- * Included a first set of EoS and observable modules
- * All free and open-source

★ **muses** beta release (February 2025)

- * We publicly released the alpha release modules
- * We invite everyone to test these modules and provide feedback
- * Includes a first set of modules (free and open-source) but still preliminary

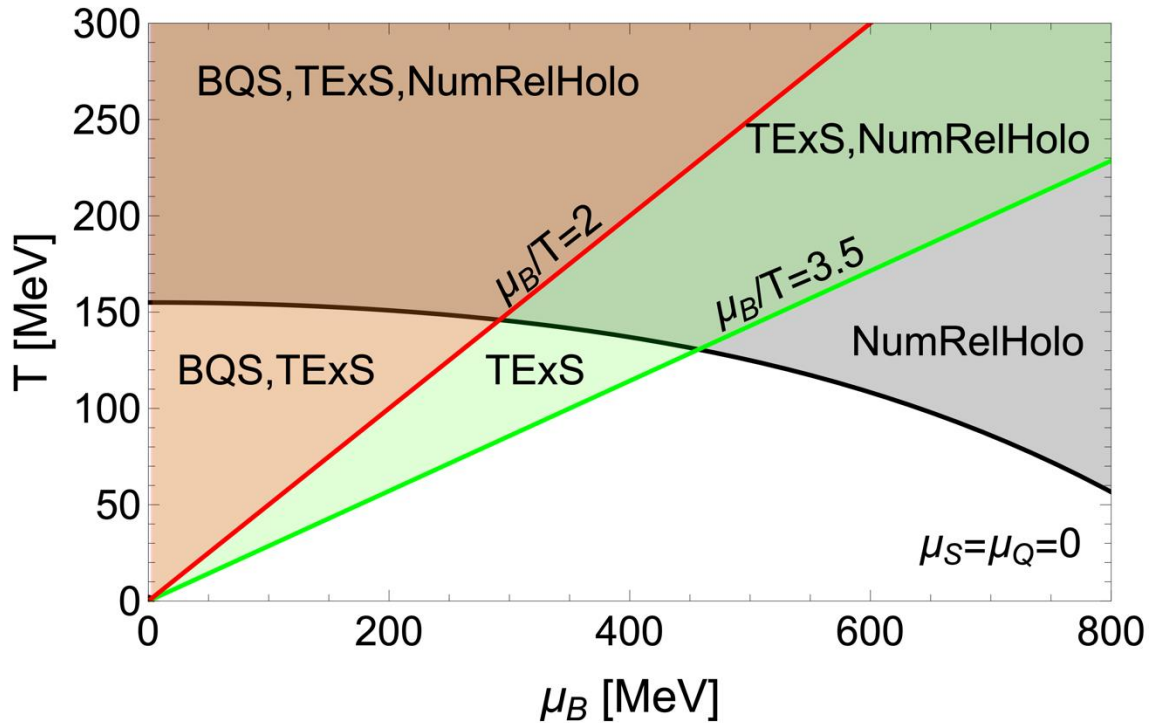

★ **muses** beta release (February 2025)

- * We publicly released the alpha release modules
 - * We invite everyone to test these modules and provide feedback
 - * Includes a first set of modules (free and open-source) but still preliminary
- finite T {
- ✓ BQS EOS: 4D lattice QCD with alternative expansion scheme in μ_B
 - ✓ ISING-TEXS EOS: 2D Critical behavior into lattice QCD alternative expansion
 - ✓ NUMRELHOLO: 2D AdS/CFT correspondence based EoS

★ **muses** beta release (February 2025)

★ **muses** beta release (February 2025)

- * We publicly released the alpha release modules
- * We invite everyone to test these modules and provide feedback
- * Includes a first set of modules (free and open-source) but still preliminary

- finite T* {
- ✓ BQS EOS: 4D lattice QCD with alternative expansion scheme in μ_B
 - ✓ ISING-TEXS EOS: 2D Critical behavior into lattice QCD alternative expansion
 - ✓ NUMRELHOLO: 2D AdS/CFT correspondence based EoS
- T ~ 0* {
- ✓ CMF: 3D Chiral EoS with different orders for deconfinement
 - ✓ CEFT: 2D EoS for interacting nucleons
 - ✓ UTK or Crust DFT: 2D EoS including nucleons and nuclei
 - ✓ Lepton module, Synthesis module, CompOSE outputs

★ **muses** beta release (February 2025)

★ **muses** beta release (February 2025)

- * We publicly released the alpha release modules
- * We invite everyone to test these modules and provide feedback
- * Includes a first set of modules (free and open-source) but still preliminary

finite T

- ✓ Transport coefficients: thermal conductivity, baryon conductivity & diffusion, shear & bulk viscosities, ...

★ **muses** beta release (February 2025)

- * We publicly released the alpha release modules
- * We invite everyone to test these modules and provide feedback
- * Includes a first set of modules (free and open-source) but still preliminary

- finite T {
 - ✓ Transport coefficients: thermal conductivity, baryon conductivity & diffusion, shear & bulk viscosities, ...
- $T \sim 0$ {
 - ✓ QLIMR module: quadrupole moment, tidal Love number, moment of inertia, mass, and radius of static and slowly rotating neutron stars
 - ✓ Flavor equilibration for weak β -equilibrium: Urca rates, relaxation rates, damping time, bulk viscosity
- both {
 - ✓ Susceptibilities

see next talk (Mateus Pelicer)
for workflow example

★ Results for CMF++

e-Print: [2409.06837](https://arxiv.org/abs/2409.06837)

★ Results for CMF++

e-Print: [2409.06837](https://arxiv.org/abs/2409.06837)

- a) scalar meson field σ normalized by vacuum
- b) deconfinement field Φ
- c) strangeness fraction
- d) charge fraction
- e) baryon density
- f) speed of sound squared with high order susceptibilities

C3 octet + decuplet + quarks ($\mu_S \neq 0, \mu_Q = -200$ MeV)

muses conclusions

- * The MUSES Calculation Engine is an application that lets you run calculations as a composable workflow compose of growing libraries of MUSES modules (see next talk from Mateus Pelicer for workflow example)
- * Users and developers can seek support and exchange ideas on the MUSES community forum
- * Everyone can run workflows on the dedicated high-performance computing cluster at NCSA operated by the MUSES collaboration for the research community (access given via login) OR self-host their own instance of the Calculation Engine using Docker Compose or Kubernetes
- * Online documentation on the use of the CE, the different modules, etc.
- * 2 MUSES mini symposia in APS meeting: NSs, HIs

muses outlook

- * Extend $T \sim 0$ modules to finite T
- * Combine $T \sim 0$ modules with finite T ones
- * Add strangeness to some $T \sim 0$ modules
- * More interpolating functions
- * Interpolate particle properties
- * Include pasta phases
- * Extend ISING-TEXS lattice QCD EOS to 4D
- * Nuclear properties module
- * Thermal-FIST module (ideal HRG and VdW)
- * Fully parametrized EoS's ...
