

Discussion: Next steps

1

How to continue/expand our studies and interactions?

Any planned actions should be “useful” and “sustainable”...

Informal study group?

Meet online approx. every ~2 months*

Hear presentations from students and senior experts, have extended discussions

Involve other colleagues, e.g. in low-energy nuclear structure, AI/ML

*Students could take lead in organizing meetings

Goals

Learn about concepts and methods in high-energy nuclear physics

Support JLab 12 GeV experiments and EIC program development

Connect low-energy nuclear structure and high-energy scattering/QCD communities

Provide environment for informal interactions and networking

Next in-person summer school: Definitely yes, where/when/how to be discussed

Will conduct survey to collect feedback and improve organization
